

# Widener University Metropolitan Hall

Kevin Engel  
Senior Thesis 2006  
Construction Management Option

## Agenda

### Outline

**Project Overview**  
**Constructability Review**  
**LEED™ Plumbing Analysis**  
**Schedule Acceleration**  
•Structure Analysis  
•SIPS Schedule

### Background Information

Analysis 1: Constructability Review Research  
Analysis 2: LEED™ Analysis of Plumbing Design  
Analysis 3: Schedule Acceleration

Kevin Engel  
Senior Thesis – Construction Management

Widener University  
Metropolitan Hall

## Project Information

### Outline

**Project Overview**  
**Constructability Review**  
**LEED™ Plumbing Analysis**  
**Schedule Acceleration**  
•Structure Analysis  
•SIPS Schedule

### Project Team

Owner: Widener University  
CM: HSC Builders & Construction Managers  
Architect: Wallace, Roberts, & Todd LLC. and CuetoKearney, LLC  
Civil Engineer: Catania Engineering Associates  
Struct. Engineer: O'Donnell & Naccarato  
MEP Engineer: Alderson Engineering

### Location

17<sup>th</sup> and Melrose Ave.  
Chester, PA 19013

Kevin Engel  
Senior Thesis – Construction Management

Widener University  
Metropolitan Hall

## General Information

### Outline

**Project Overview**  
**Constructability Review**  
**LEED™ Plumbing Analysis**  
**Schedule Acceleration**  
•Structure Analysis  
•SIPS Schedule

### Construction Information

Use: Apartment Style Dormitory  
Size: 92,000 s.f.  
Cost: Total = 18 million, Building = 15 million  
Schedule: July 2005 – August 2006

### Structure

Floors and Roof: Precast Hollow Core Concrete Plank  
Walls: 8" CMU

### Other

LEED™ Certified  
Geothermal Heat Pump System  
R-2 Zoning

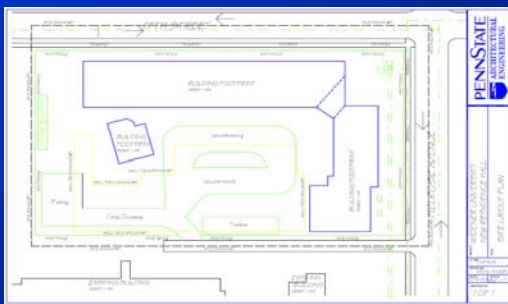

Kevin Engel  
Senior Thesis – Construction Management

Widener University  
Metropolitan Hall

## Site Layout

### Outline

**Project Overview**  
**Constructability Review**  
**LEED™ Plumbing Analysis**  
**Schedule Acceleration**

# Constructability Review

**Outline**  
**Project Overview**  
**Constructability Review**  
**LEED™ Plumbing Analysis**  
**Schedule Acceleration**  
 •Structure Analysis  
 •SIPS Schedule

**Reason for Research**

- Increasing Pressure on Architects
- Shortening of Design Time
- Increasingly Complex Projects
- Errors and Omissions claims against Designers becoming more common
- Newer process that is catching on
  - (currently required by 12 state DOT's)

**Data Acquired**

- Supplied by The Foreman Group
- General Information from 13 Projects
- Detailed Reports from 5 projects
- General information compared against other projects in Foreman database
- All Projects Lump Sum, Multiple Prime Contractors

# Method of Design Checks

**Outline**  
**Project Overview**  
**Constructability Review**  
**LEED™ Plumbing Analysis**  
**Schedule Acceleration**  
 •Structure Analysis  
 •SIPS Schedule

**Create Team of 5-10 people**

- Superintendent
- Architect
- Project Manager
- Structural Engineer
- Mechanical Engineer
- Electrical Engineer

# Method of Design Checks

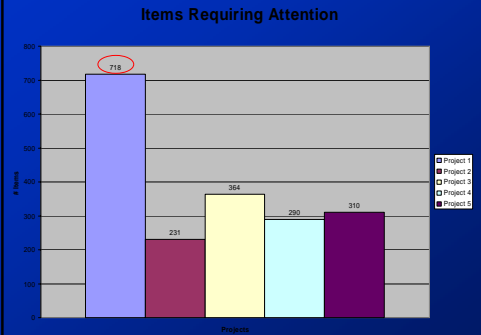

**Outline**  
**Project Overview**  
**Constructability Review**  
**LEED™ Plumbing Analysis**  
**Schedule Acceleration**  
 •Structure Analysis  
 •SIPS Schedule

**Complete Checklist**

- Approx. 500 Items
- Divided into General, Site, Architectural, Structural, HVAC, Electrical, and Interiors
- Look for any conflicts between drawings
- Check that specs. do not conflict with plans
- Locate confusing areas
- Add project specific items to checklist

# Effectiveness

**Outline**  
**Project Overview**  
**Constructability Review**  
**LEED™ Plumbing Analysis**  
**Schedule Acceleration**  
 •Structure Analysis  
 •SIPS Schedule

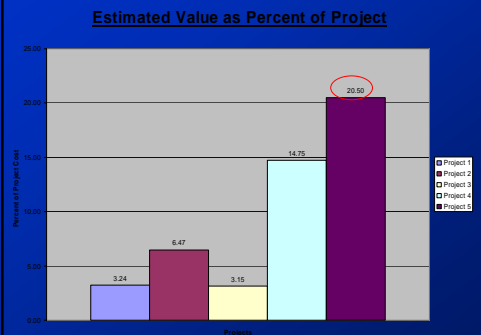

# Effectiveness

 •Structure Analysis  
 •SIPS Schedule

## 8 Items Found on Every Project

**Outline**  
**Project Overview**  
**Constructability Review**  
**LEED™ Plumbing Analysis**  
**Schedule Acceleration**  
 •Structure Analysis  
 •SIPS Schedule

1. Reflected ceiling plans match architectural floor plans. All MEP fixture locations are coordinated with ceiling.
  - RCP's did not match lighting fixture requirements with the mechanical and plumbing needs, room numbers or walls shown incorrectly on RCP.
2. All material choices listed in the finish schedule are consistent with the materials identified on the plans and specs.
  - The finish schedule was either incomplete, missing, or in conflict with the specifications.
3. The size, location and type of foundations are clearly defined on the plans. Foundation plans include drains and tie-ins.
  - Foundation drains or depth not shown in the plans
4. Structural drawings are clear and do not confuse bidders with respect to scope issues.
  - There were items missing from any scope of work and items that were covered under more than one scope.

Kevin Engel  
 Senior Thesis – Construction Management

Widener University  
 Metropolitan Hall

## 8 Items Found on Every Project

**Outline**  
**Project Overview**  
**Constructability Review**  
**LEED™ Plumbing Analysis**  
**Schedule Acceleration**  
 •Structure Analysis  
 •SIPS Schedule

5. HVAC routing of duct and pipe does not conflict with architectural plans.
  - All of the projects had conflicts between mechanical or electrical work and the ceiling.
6. Architectural and Electrical drawings appear to be coordinated.
  - Missing fixtures, equipment, and specialties, also inadequate clearances for electrical items.
7. Specifications- Contractors scopes are clearly defined.
  - The specifications were missing work scopes, contained improperly defined scopes, or missed items.
8. Roof Drains shown and correct.
  - The Roof Plans did not show gutters and downspouts. Some did not show any roof drains or had them in locations that conflicted with architectural or plumbing drawings. Also, several Roof Plans showed roof types that differed from the specifications or other plans.

Kevin Engel  
 Senior Thesis – Construction Management

Widener University  
 Metropolitan Hall

## Problems

**Outline**  
**Project Overview**  
**Constructability Review**  
**LEED™ Plumbing Analysis**  
**Schedule Acceleration**  
 •Structure Analysis  
 •SIPS Schedule

Kevin Engel  
 Senior Thesis – Construction Management

Widener University  
 Metropolitan Hall

## Other Data

**Outline**  
**Project Overview**  
**Constructability Review**  
**LEED™ Plumbing Analysis**  
**Schedule Acceleration**  
 •Structure Analysis  
 •SIPS Schedule

- For typical \$15 million project:
- Plan Review costs \$30,000
  - \$100,000 of Potential Change Orders Found
  - Number of RFI's cut in half
  - Out of 260 contracts, only 1 claim filed

Kevin Engel  
 Senior Thesis – Construction Management

Widener University  
 Metropolitan Hall

## Conclusions

**Outline**  
**Project Overview**  
**Constructability Review**  
**LEED™ Plumbing Analysis**  
**Schedule Acceleration**  
 •Structure Analysis  
 •SIPS Schedule

- Everybody Makes Mistakes
- Having an independent company review design documents before bids are taken will help reduce change orders later in the project.
  - Catching major errors can save a considerable amount of money
  - Reviews are more effective if designers are open to revisions.
- The Same Mistakes Are Being Repeated
- Report serves as feedback loop, designers should learn what to look for and check for it on their own
  - Contractors know what to look for during bidding

Kevin Engel  
 Senior Thesis – Construction Management

Widener University  
 Metropolitan Hall

## Conclusions

**Outline**  
**Project Overview**  
**Constructability Review**  
**LEED™ Plumbing Analysis**  
**Schedule Acceleration**  
 •Structure Analysis  
 •SIPS Schedule

- Constructability Reviews Benefit All Involved
- Owner- Reduced Change Orders Later in Project
  - Architect- Less likely to have claim filed against them, half the RFI's of a normal project
  - Contractors- Clearer construction documents are easier to understand
- Reviews Most Effective If Designers Cooperate
- Need to know how the process can benefit them
  - Owner needs to enforce the execution of the reviews

Kevin Engel

# LEED™ Basics

- Outline**
  - Project Overview**
  - Constructability Review**
  - LEED™ Plumbing Analysis**
  - Schedule Acceleration**
  - Structure Analysis
  - SIPS Schedule
- LEED™ = Leadership in Energy and Environmental Design**
- Rating system for environmental friendliness of buildings
- 2 Points Available for Water Reduction**
- Savings compared against Energy Policy Act of 1992 Req.
  - 1 point for 20% water savings
  - 2'nd point for 30% water savings
  - Fixtures compared limited to:
    - Water closets
    - Urinals
    - Lavatory faucets
    - Showers
    - Kitchen sinks

# Requirements

- Outline**
  - Project Overview**
  - Constructability Review**
  - LEED™ Plumbing Analysis**
  - Schedule Acceleration**
  - Structure Analysis
  - SIPS Schedule
- Fixture Flow Requirements per Energy Policy Act of 1992**
- Water Closets = 1.6 gpf
  - Urinals = 1.0 gpf
  - Showerheads = 2.5 gpm
  - Faucets = 2.5 gpm

# Design Comparison

- Outline**
  - Project Overview**
  - Constructability Review**
  - LEED™ Plumbing Analysis**
  - Schedule Acceleration**
  - Structure Analysis
  - SIPS Schedule
- This is the only noticeable design change

Strict schedule due to need to occupy building in Fall 2006  
 2 Schedule Reduction Ideas Analyzed

- Change in Structural System
  - Design-Build Contract allows Construction Manager to make design decisions
- SIPS Scheduling of Finish Trades
  - More detailed planning in order to reduce time needed to complete finishes

Kevin Engel  
 Senior Thesis – Construction Management

Widener University

 •SIPS Schedule

Tilt-Up Wall Panels found to be least expensive structural option while also saving money

Wall Type	Daily output	Unit Cost	Unit	Duration (days)	Total Cost (\$)
CMU	365	5.95	s.f.	252	320033
Steel Column	600	21.50	I.f.(column)	4	4300
CMU Wall	375	5.70	s.f.	245	524400
Steel Girders	912	42.50	I.f.	1.1	43818
Steel Total				250.9	572518
Precast Concrete	768	13.45	s.f.	120	723435
Tilt-Up	1600	5.42	s.f.	58	291526

\* Tilt up cost includes: preparation of pouring surface, erect and strip forms, concrete in place, steel trowel finish and curing, reinforcing, inserts and misc. items, panel erection and alignment

## Panel Final Notes

### Outline

Project Overview  
 Constructability Review  
 LEED™ Plumbing Analysis  
 Schedule Acceleration  
 •Structure Analysis  
 •SIPS Schedule

### Panel description:

6" thick, with #3 rebar spaced 12" o.c. in both directions located 1-1/2 inches from the top of the panel as poured and two #3 rebar 1-1/2 inches from the top of the cantilevered sections around the window

### Panel checked and meets the following failure possibilities:

- Shear at lifting points
- Moment at lifting points
- Load in place
- Failure at window openings

## SIPS

### Outline

Project Overview  
 Constructability Review  
 LEED™ Plumbing Analysis  
 Schedule Acceleration  
 •Structure Analysis  
 •SIPS Schedule

### SIPS = Short Interval Production Scheduling

- A method of planning to increased detail in order to improve efficiency
- First documented by Alvin Burkhart in 1989 article titled "The use of SIPS as a productivity improvement tool."

### Finishing Trades Defined As:

- wall painting
- ceiling
- electrical trim and lights
- casework
- plumbing fixtures
- doors and hardware
- flooring

## Productivity Rates

### Outline

Project Overview  
 Constructability Review  
 LEED™ Plumbing Analysis  
 Schedule Acceleration  
 •Structure Analysis  
 •SIPS Schedule

### Productivity rates of finish activities

Hours/Unit	Unit	Activity
0.006	s.f.	Paint Walls
0.011	s.f.	Paint Ceiling
0.50	ea.	Elec. Trim & Light Fixt.
0.40	l.f.	Casework
1.6	ea.	Plumbing Fixt.
1.14	ea.	Doors / Hardware
0.016	s.f.	Flooring

## Balancing Durations

### Outline

Project Overview  
 Constructability Review  
 LEED™ Plumbing Analysis  
 Schedule Acceleration  
 •Structure Analysis  
 •SIPS Schedule

### Vary crew size in order to give each activity the same duration

crew size	Preffered Order	Durations	# Crews Needed	Resulting Duration (days)
1	Paint Walls	2 days	2	1
1	Paint Ceiling	2.25 days	2*	1.125
1	Elec. Trim & Light Fixt.	2 days	2	1
2	Casework	1 day	1	1
1	Plumbing Fixt.	2 days	2	1
1	Doors / Hardware	1 day	1	1
1	Flooring	2.5 days	2*	1.25

\* It is cheaper to pay overtime for these two activities than to add another person

## SIPS Table Graphic

## Schedule Comparison

### Outline

Project Overview  
 Constructability Review  
 LEED™ Plumbing Analysis  
 Schedule Acceleration  
 •Structure Analysis  
 •SIPS Schedule

- The SIPS Schedule reduced the time required for finish trades from 34 to 33 days per floor
- The work flowed in a more orderly fashion and would be easier to speed up by joining adjacent areas

## 4D Model

## Thesis Conclusion

### Outline

#### Project Overview

#### Constructability Review

#### LEED™ Plumbing Analysis

#### Schedule Acceleration

- Structure Analysis
- SIPS Schedule

### Constructability Reviews

- Save money by reducing change orders
- Reduce RFI's, making project flow more smoothly
- Result in clearer construction documents

### Plumbing Analysis

- 2 Possible LEED™ Points
- Payback Period of 2 years

### Schedule Acceleration

- Tilt-up concrete panels can be faster, less expensive structural system
- SIPS scheduling will not necessarily reduce time, but will introduce more orderly flow to work
