

Washingtonian Center

Lee Ressler

April 15, 2008

Faculty Advisor: Dr. Memari

Presentation Outline

Background Information

Project Goals

Structural Depth

- Existing Steel System
- Redesigned Concrete System

Construction Management Breadth

- Steel Structural Estimate
- Concrete Structural Estimate

System Comparisons

Final Recommendation

Project Information

General Statistics

- Name: Washingtonian Center
- Location: Gaithersburg Maryland
- Size: 199,164 S.F.
- Function: Office Space
- Levels: Eight Floors

Project Team

- Owner: Washington Property Company
- Architect: Wisnewski Blair and Associates LTD
- Structural: Echelon Engineering
- MEP: GHT Limited

Background Information

Project Goals

Structural Depth

CM Breadth

Architectural Breadth

System Comparison

Final Recommendation

Site

- Located in Gaithersburg Maryland
- Previously Undeveloped Site
- 8 Acre Lot
- Planned Development Includes Two Office Buildings and a Parking Structure

Background Information

Project Goals

Structural Depth

Architectural Breadth

System Comparison

Final Recommendation

Thesis Goal

“Determine the Best Structural Design For the Washingtonian Center”

Goal Achieved By:

1. Redesigning the Structure Using Concrete

- Increase Leasable Space By Reducing Floor-to-Floor Heights So That An Additional Floor Can Be Added Beneath The 125' Height Restriction

2. Comparing the Redesign to the Original Steel Design

- Structural Costs
- Leasing Revenue
- Construction Time
- Architectural Considerations

Background Information

Project Goals

Structural Depth

CM Breadth

Architectural Breadth

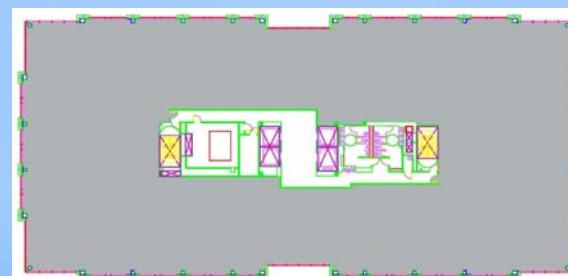

System Comparison

Final Recommendation

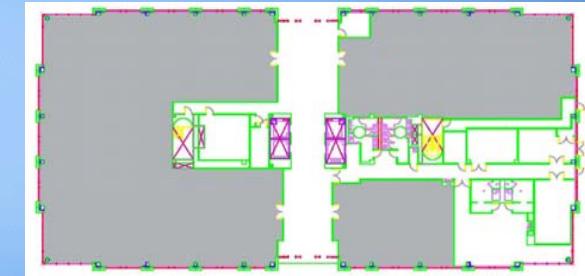

Structural Depth: Existing System

- Core and Envelope Design
- Leasable Space Shown in Grey

Typical Architectural Floor Plan: Floors 3-8

First Floor Architectural Plan

Background Information

Project Goals

Structural Depth

Architectural Breadth

System Comparison

Final Recommendation

Structural Depth: Existing System

Frame:

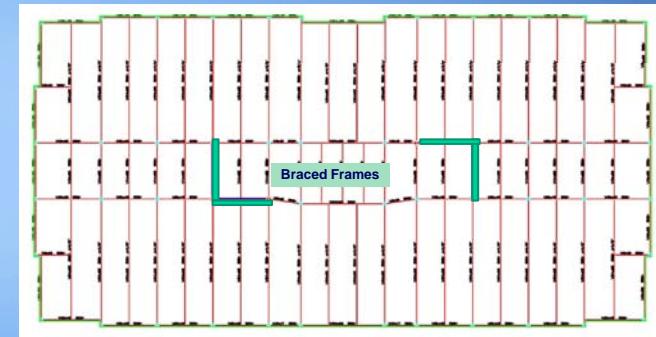

- Structural Steel Members
- Outer Bays: Typically W21x44 Spanning 45'- Spaced 10'
- Inner Bays: Typically W14x22 Spanning 20'- Spaced 10'

Floor System:

- 20 Gage Composite Steel Deck: 3" Deep, 3.25" LW Topping

Columns:

- Spliced at the 4th and 7th Levels
- Gravity Columns Range From W10x49-W12x96

Structural Depth: Existing System

Lateral Frame:

- 4 Identical Concentrically Braced Chevron Frames
- Located Around the Elevator Core

Lateral Columns:

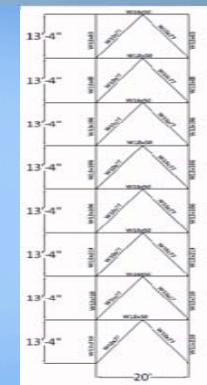

- Spliced at the 4th and 7th Levels
- W12x210 at Base, W12x106 in Middle, W12x65 at Top

Braces:

- W10x77 at all Levels

Beams:

- W18x50 at all Levels

Braced Frame Elevation

Braced Frame Locations

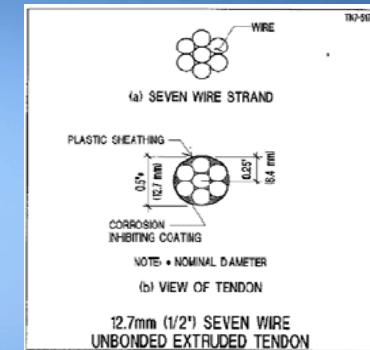

Structural Depth: PT-Floor

Design Procedure

- Ram Concept was used for design
- Initial Tendon numbers/spacing based on 150 psi pre-compression
- Balance 75% of dead load
- Add stud rails at locations of punching shear failures
- Jacking Stress= $0.8f_{pu}$
- Total Losses at service loading= 19%

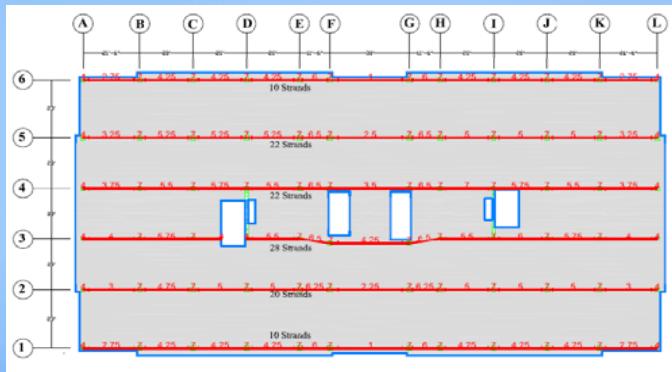

<i>PT System</i>	
1/2"	Un-bonded Seven Wire Strand
$A_{ps} = 0.153 \text{ in}^2$	
$E_{ps} = 28000 \text{ ksi}$	
$f_{st} = 175 \text{ ksi}$	
$f_{yy} = 243 \text{ ksi}$	
$f_{pu} = 270 \text{ ksi}$	
$f_j = 216 \text{ ksi}$	

Structural Depth: PT-Floor

Banded Tendon Layout

**Banded Tendons:**

- Initial Number Based 150 psi Pre-Compression in Band Strip
- Profile Height Initially 7" Over Columns
- Profile Height Initially 1" at Mid-span
- Number/Profiles Altered at Mid-Span to Balance 75% of Dead Load
- Additional Tendons Added at Locations of Tensile Failures

Background Information

Final Recommendation

Structural Depth: PT-Floor

Distributed Tendons:

- Initial Number and Spacing Based 150 psi Pre-Compression
- Profile Height Initially 7" Over Columns
- Profile Height Initially 1" at Mid-span
- Profile Heights Altered at Mid-Span to Balance 75% of Dead Load
- Additional Tendons Added at Locations of Tensile Failures

Latitude Mild Steel Reinforcement

Mild Steel Reinforcement

- Added by requirements of ACI 318-08
- Top Bars: Typically #5 bars over supports extending at least $\frac{1}{6}$ th span in each direction, distributed over design strip

6 #4 x 13 B.	5 #5 x 5.5 T.	5 #5 x 5.5 T.
9 #4 x 10 B.		
- Bottom Bars: Typically #4 bars at mid-span extending at least $\frac{1}{3}$ rd the span, distributed over design strip

2 #5 x 2.5 T.	6 #5 x 10 T.	5 #5 x 5.5 T.
9 #4 x 10 B.	5 #5 x 5.5 T.	5 #5 x 5.5 T.

Structural Depth: Shear Walls

Designed in Etabs

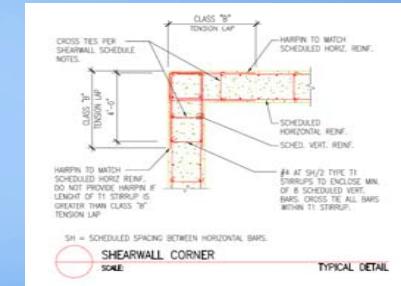

- Service Model Sized Walls
 - Cracking Factors Initially Set to 1.0
 - Cracked Sections Changed to 0.5
- Strength Model Designed Reinforcement
 - Cracking Factors Initially Set to 0.7
 - Cracked Sections Changed to 0.35 (ACI 318-08 Section 10.10.4.1)
- 5000 psi concrete

Structural Depth: Shear Walls

Shear Wall Schedule

Level	Vert. Bars Each Face	Hor. Bars Each Face
Roof	#5 @ 12" o.c.	#4 @ 12" o.c.
9th	#5 @ 12" o.c.	#4 @ 12" o.c.

[Background Information](#)[Project Goals](#)[Structural Depth](#)[CM Breadth](#)[Architectural Breadth](#)[System Comparison](#)[Final Recommendation](#)

Final Recommendation

Although the concrete design would provide additionally leasable space, the best solution for the Washingtonian Center is the original steel design.
