

# Chemistry Building

Michael Gallagher | Construction Management  
AE Faculty Consultant: Dr. Riley

The Pennsylvania State University AE Senior Thesis Project

## Presentation Outline

- **Project Background**
- **Analysis #1: Bringing BIM into the Field**
  - Vico Software and Trimble
  - Vela Systems
  - Impacts of Implementing New Technology
- **Analysis #2: Alternative Curtain Wall Systems**
  - System Design
  - Architectural Impacts
  - Schedule/Cost Impacts
- **Analysis #3: Feasibility of PV Curtain Wall**
  - Electrical Breadth Design
  - Energy/Electrical Impacts
  - Feasibility Analysis
- **Lesson Learned**
- **Acknowledgments**

□ **Project Background**

- Analysis #1: Bringing BIM Into the Field
- Analysis #2: Alternative Curtain Wall Systems
- Analysis #3 : Feasibility of PV Curtain Wall System
- Lessons Learned
- Acknowledgments & Questions

## PROJECT BACKGROUND

### Project Data

Occupant: University  
Size: 265,000 SF  
Total Height: 4 floors  
Function: Research Labs and Offices  
Construction Dates: 9/4/2007 to 11/2/2010

---

Michael Gallagher  
AE Senior Thesis 2011

Construction Management  
Advisor: Dr. Riley

□ **Project Background**

- Analysis #1: Bringing BIM Into the Field
- Analysis #2: Alternative Curtain Wall Systems
- Analysis #3 : Feasibility of PV Curtain Wall System
- Lessons Learned
- Acknowledgments & Questions

## PROJECT BACKGROUND

### Project Data

Occupant: University  
Size: 265,000 SF  
Total Height: 4 Floors  
Function: Research Labs and Offices  
Construction Dates: 9/4/2007 to 11/2/2010

### Project Team

CM Agency:	Turner Construction
Design Architect:	Hopkins Architects
Executive Architect:	Payette Associates
Engineer:	ARUP

---

Michael Gallagher  
AE Senior Thesis 2011

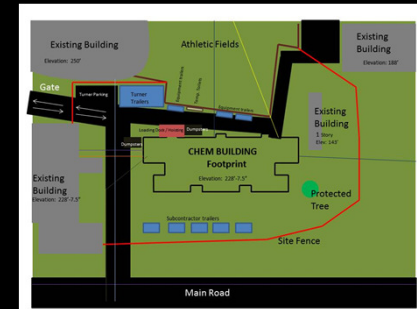

Construction Management  
Advisor: Dr. Riley

### □ Project Background

- Analysis #1: Bringing BIM Into the Field
- Analysis #2: Alternative Curtain Wall Systems
- Analysis #3 : Feasibility of PV Curtain Wall System
- Lessons Learned
- Acknowledgments & Questions

### Building Design / Layout

Michael Gallagher  
AE Senior Thesis 2011

Construction Management  
Advisor: Dr. Riley

□ Project Background

□ **Analysis #1: Bringing BIM Into the Field**

- Vico Software and Trimble
- Vela Systems
- Impacts of Implementing New Technology

□ Analysis #2: Alternative Curtain Wall Systems

□ Analysis #3 : Feasibility of PV Curtain Wall System

□ Lessons Learned

□ Acknowledgments & Questions

## Bringing BIM Into the Field

### Problem Identification

- BIM model only used for 3D MEP Coordination

### Research Goal

- Show the benefits of BIM and how it can be utilized more on a project

---

Michael Gallagher  
AE Senior Thesis 2011

Construction Management  
Advisor: Dr. Riley

□ Project Background

□ **Analysis #1: Bringing BIM Into the Field**

- Vico Software and Trimble
- Vela Systems
- Impacts of Implementing New Technology

□ Analysis #2: Alternative Curtain Wall Systems

□ Analysis #3 : Feasibility of PV Curtain Wall System

□ Lessons Learned

□ Acknowledgments & Questions

## Bringing BIM Into the Field

### Problem Identification

- BIM model only used for 3D MEP Coordination

### Research Goal

- Show the benefits of BIM and how it can be utilized more on a project

### Potential Areas to Implement

- Steel, Concrete and MEP Layout
- Commissioning
- Punchlist
- Tracking Progress
- Tracking Materials
- Safety
- QA/QC
- Turnover / Maintenance / Warranty

Michael Gallagher  
AE Senior Thesis 2011

Construction Management  
Advisor: Dr. Riley

□ Project Background

□ **Analysis #1: Bringing BIM Into the Field**

- Vico Software and Trimble
- Vela Systems
- Impacts of Implementing New Technology

□ Analysis #2: Alternative Curtain Wall Systems

□ Analysis #3 : Feasibility of PV Curtain Wall System

□ Lessons Learned

□ Acknowledgments & Questions

**New Technology**

**Bringing BIM Into the Field**

**Problem Identification**

- BIM model only used for 3D MEP Coordination

□ Vela Systems

□ Impacts of Implementing New Technology

□ Analysis #2: Alternative Curtain Wall Systems

□ Analysis #3 : Feasibility of PV Curtain Wall System

□ Lessons Learned

□ Acknowledgments & Questions

## Vico Software and Trimble

- Vico and Trimble have a Partnership
- Allows you to export information from Vico Software and 3D model to Trimble Field Layout Solution
- Can use GPS, Laser, and a Total Station to layout steel, concrete, MEP, and walls all based on coordinates from the 3D Model

Michael Gallagher  
AE Senior Thesis 2011

Construction Management  
Advisor: Dr. Riley

□ Project Background

□ Analysis #1: Bringing BIM Into the Field

□ Vico Software and Trimble

□ Vela Systems

□ Impacts of Implementing New Technology

□ Analysis #2: Alternative Curtain Wall Systems

□ Analysis #3 : Feasibility of PV Curtain Wall System

□ Lessons Learned

## Vico Software and Trimble

- Vico and Trimble have a Partnership
- Allows you to export information from Vico Software and 3D model to Trimble Field Layout Solution
- Can use GPS, Laser, and a Total Station to layout steel, concrete, MEP, and walls all based on coordinates from the 3D Model

### Benefits

- Reduces errors during construction
- Improves QA/QC
- Improved Coordination
- Insures MEP is placed in correct locations

Michael Gallagher  
AE Senior Thesis 2011

Construction Management  
Advisor: Dr. Riley

□ Project Background

□ **Analysis #1: Bringing BIM Into the Field**

□ Vico Software and Trimble

□ **Vela Systems**

□ Impacts of Implementing New Technology

□ Analysis #2: Alternative Curtain Wall Systems

□ Analysis #3 : Feasibility of PV Curtain Wall System

□ Lessons Learned

□ Acknowledgments & Questions

## Vela Systems

- Vela's goal is to help better manage construction projects
- Program that contains all the documents pertaining to project such as drawings, ASI's, RFI's, Specs, etc.
- Everyone has access and anyone can upload information to it

---

Michael Gallagher  
AE Senior Thesis 2011

Construction Management  
Advisor: Dr. Riley

Project Background

**Analysis #1: Bringing BIM Into the Field**

- Vico Software and Trimble
- Vela Systems

**Impacts of Implementing New Technology**

Analysis #2: Alternative Curtain Wall Systems

Analysis #3 : Feasibility of PV Curtain Wall System

Lessons Learned

Acknowledgments & Questions

## Impacts of Implementing New Technology

### Vela Systems - Case Studies

- Skanska – New Meadowlands Stadium
- Turner Construction – 10 Rittenhouse Square Philadelphia, PA and Hampton Roads Naval Housing Norfolk, VA
- Barton Malow – Maryland General Hospital in Baltimore
- Cianbro – Destiny USA, Syracuse, New York

---

Michael Gallagher  
AE Senior Thesis 2011

Construction Management  
Advisor: Dr. Riley

□ Project Background

□ Analysis #1: Bringing BIM Into the Field

## Impacts of Implementing New Technology

### Vela Systems - Case Studies

- Skanska – New Meadowlands Stadium
- Turner Construction – 10 Rittenhouse Square Philadelphia, PA and Hampton Roads Naval Housing Norfolk, VA
- Barton Malow – Maryland General Hospital in Baltimore
- Cianbro – Destiny USA, Syracuse, New York

Bob Wunderlich, Quality Control Manager for Turner Construction Company said “We pick up a day of time on schedule every week or so. You continue to pick up a day here and there and pretty soon it adds up.”

---

Michael Gallagher  
AE Senior Thesis 2011

Construction Management  
Advisor: Dr. Riley

□ Project Background

□ **Analysis #1: Bringing BIM Into the Field**

- Vico Software and Trimble
- Vela Systems

□ **Impacts of Implementing New Technology**

□ Analysis #2: Alternative Curtain Wall Systems

□ Analysis #3 : Feasibility of PV Curtain Wall System

□ Lessons Learned

□ Acknowledgments & Questions

**Potential Benefits**

- Cost Savings
- Schedule Reduction
- Improved Communication
- Everyone has the newest drawings / information

**Impacts of Implementing New Technology**

**Vela Systems - Case Studies**

- Skanska – New Meadowlands Stadium
- Turner Construction – 10 Rittenhouse Square Philadelphia, PA and Hampton Roads Naval Housing Norfolk, VA
- Barton Malow – Maryland General Hospital in Baltimore
- Cianbro – Destiny USA, Syracuse, New York

Bob Wunderlich, Quality Control Manager for Turner Construction Company said “We pick up a day of time on schedule every week or so. You continue to pick up a day here and there and pretty soon it adds up.”

Michael Gallagher  
AE Senior Thesis 2011

Construction Management  
Advisor: Dr. Riley

- Project Background
- Analysis #1: Bringing BIM Into the Field
- **Analysis #2: Alternative Curtain Wall Systems**
  - System Design
  - Architectural Impacts
  - Schedule/Cost Impacts
- Analysis #3 : Feasibility of PV Curtain Wall System
- Lessons Learned
- Acknowledgments & Questions

## Alternative Curtain Wall Systems

### Problem Identification

- \$40+ million dollar curtain wall system
- Size of the glass did not allow to be manufactured in the U.S.
- Egress stair tower glass breaking
- Scope was so large – almost no bidders

### Research Goal

- Find another system that costs less and/or is able to incorporate PV into it

Michael Gallagher  
AE Senior Thesis 2011

Construction Management  
Advisor: Dr. Riley

- Project Background
- Analysis #1: Bringing BIM Into the Field
- **Analysis #2: Alternative Curtain Wall Systems**
  - System Design
  - Architectural Impacts
  - Schedule/Cost Impacts
- Analysis #3 : Feasibility of PV Curtain Wall System
- Lessons Learned
- Acknowledgments & Questions

## System Design

### Scenario #1

- Maintain large glass size and implement PV glass where fritted glass is currently located on exterior façade

### Scenario #2

- Reduce glass size and implement PV where fritted glass is currently located on exterior façade

### Scenario #3

- Reduce glass size and maintain fritted glass where currently located – no PV

---

Michael Gallagher  
AE Senior Thesis 2011

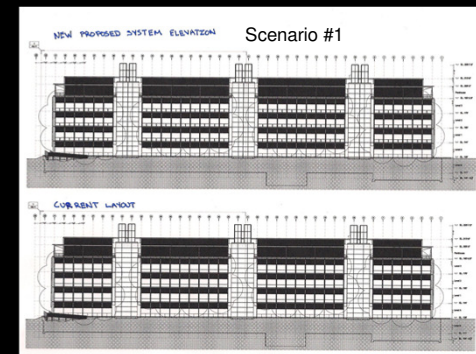

Construction Management  
Advisor: Dr. Riley

- Project Background
- Analysis #1: Bringing BIM Into the Field
- Analysis #2: Alternative Curtain Wall Systems
  - System Design
    - Architectural Impacts
    - Schedule/Cost Impacts
- Analysis #3 : Feasibility of PV Curtain Wall System
- Lessons Learned
- Acknowledgments & Questions

## System Design

### Schuco E<sup>2</sup> Façade – Scenario #1

- Maintain large glass size and implement PV glass where fritted glass is currently located on exterior façade

Michael Gallagher  
AE Senior Thesis 2011

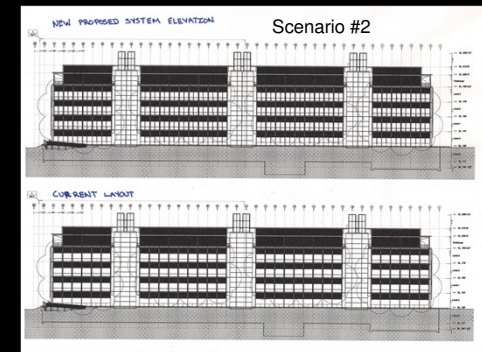

Construction Management  
Advisor: Dr. Riley

- Project Background
- Analysis #1: Bringing BIM Into the Field
- Analysis #2: Alternative Curtain Wall Systems
  - System Design
    - Architectural Impacts
    - Schedule/Cost Impacts
- Analysis #3 : Feasibility of PV Curtain Wall System
- Lessons Learned
- Acknowledgments & Questions

## System Design

### Schuco E<sup>2</sup> Façade – Scenario #2

- Reduce glass size and implement PV glass where fritted glass is currently located on exterior façade

Michael Gallagher  
AE Senior Thesis 2011

Construction Management  
Advisor: Dr. Riley

- Project Background
- Analysis #1: Bringing BIM Into the Field
- **Analysis #2: Alternative Curtain Wall Systems**
  - System Design
  - **Architectural Impacts**
  - Schedule/Cost Impacts
- Analysis #3 : Feasibility of PV Curtain Wall System
- Lessons Learned
- Acknowledgments & Questions

## Architectural Impacts

### Minimal Changes

- Largest PV glass size is 8' x 7'
- Sizes of glass being replaced
  - 5.5' x 5.5'
  - 3' x 10.5'
  - 5.5' x 10.5'
- Proposed New Sizes
  - 5.5' x 5.5'
  - 3' x 5.25'
  - 5.5' x 5.25'
- Non-Stair tower Glass – Interior Mullion is behind Aluminum Panel on the inside

Michael Gallagher  
AE Senior Thesis 2011

Construction Management  
Advisor: Dr. Riley

- Project Background
- Analysis #1: Bringing BIM Into the Field
- **Analysis #2: Alternative Curtain Wall Systems**
  - System Design
  - Architectural Impacts
  - **Schedule/Cost Impacts**
- Analysis #3 : Feasibility of PV Curtain Wall System
- Lessons Learned
- Acknowledgments & Questions

## Schedule / Cost Impacts

- Current System for the purpose of this analysis is roughly \$20 million dollars
- This price only includes the following
  - Price of the glass
  - Aluminum Extrusions
  - Steel Structure supports
  - Gaskets and Silicone
  - Hoisting
  - Installation

---

Michael Gallagher  
AE Senior Thesis 2011

Construction Management  
Advisor: Dr. Riley

□ Project Background

□ Analysis #1: Bringing BIM Into the Field

□ **Analysis #2: Alternative Curtain Wall Systems**

- System Design
- Architectural Impacts

□ **Schedule/Cost Impacts**

□ Analysis #3 : Feasibility of PV Curtain Wall System

□ Lessons Learned

□ Acknowledgments & Questions

Scenario # 2

Cost of PV Glass found in the range of Reliability of PV Curtain Wall System

$$(\$200/sq) (79,000sq) + (\$1,593,450)$$

**= \$23,713,400**

For LAURE same size glass as current system and PV glass replacing exterior double glass

## Schedule / Cost Impacts

- Current System for the purpose of this analysis is roughly \$20 million dollars
- This price only includes the following
  - Price of the glass
  - Aluminum Extrusions
  - Steel Structure supports
  - Gaskets and Silicone
  - Hoisting
  - Installation

Michael Gallagher  
AE Senior Thesis 2011

Construction Management  
Advisor: Dr. Riley

□ Project Background

□ Analysis #1: Bringing BIM Into the Field

□ Analysis #2: Alternative Curtain Wall Systems

- System Design
- Architectural Impacts

□ **Schedule/Cost Impacts**

□ Analysis #3 : Feasibility of PV Curtain Wall System

□ Lessons Learned

□ Acknowledgments & Questions

Scenario #1

Cost of PV Glass found in the analysis of Feasibility of PV Curtain Wall System

$$(\$280/\text{sq}) (79,000\text{sq}) + (\$1,593,480)$$
$$= \$23,713,480$$

For LARGE same size glass as current system and PV glass replacing exterior framed glass

Scenario #2

$$(\$180/\text{sq}) (79,000\text{sq}) + (\$1,593,480)$$
$$= \$15,813,480$$

For smaller glass and PV glass replacing exterior framed glass

## Schedule / Cost Impacts

- Current System for the purpose of this analysis is roughly \$20 million dollars
- This price only includes the following
  - Price of the glass
  - Aluminum Extrusions
  - Steel Structure supports
  - Gaskets and Silicone
  - Hoisting
  - Installation

Michael Gallagher  
AE Senior Thesis 2011

Construction Management  
Advisor: Dr. Riley

- Project Background
- Analysis #1: Bringing BIM Into the Field
- **Analysis #2: Alternative Curtain Wall Systems**
  - System Design
  - Architectural Impacts
  - **Schedule/Cost Impacts**
- Analysis #3 : Feasibility of PV Curtain Wall System
- Lessons Learned
- Acknowledgments & Questions

**Scenario #1**

Cost of PV Glass found in the range of Reliability of PV Curtain Wall System

$$(\$280/\text{sf}) (79,000\text{sf}) + (\$1,593,480)$$

$$= \$23,713,480$$

For LARGE same size glass as current system and PV glass replacing exterior framed glass

**Scenario #2**

$$(\$180/\text{sf}) (79,000\text{sf}) + (\$1,593,480)$$

$$= \$15,813,480$$

For smaller glass and PV glass replacing exterior framed glass

**Scenario #3**

$$(\$180/\text{sf}) (79,000\text{sf}) = \$14,220,000$$

For smaller glass and manufacturing framed glass

Not same as framed glass

$\$18/\text{sf}$

$\$22,000/\text{sf}$  of all framed glass

$$(\$14,220,000) + (\$22,000/\text{sf}) (25,000\text{sf}) = \$14,670,000$$

## Schedule / Cost Impacts

- Current System for the purpose of this analysis is roughly \$20 million dollars
- This price only includes the following
  - Price of the glass
  - Aluminum Extrusions
  - Steel Structure supports
  - Gaskets and Silicone
  - Hoisting
  - Installation

Michael Gallagher  
AE Senior Thesis 2011

Construction Management  
Advisor: Dr. Riley

- Project Background
- Analysis #1: Bringing BIM Into the Field
- **Analysis #2: Alternative Curtain Wall Systems**
  - System Design
  - Architectural Impacts
  - **Schedule/Cost Impacts**
- Analysis #3 : Feasibility of PV Curtain Wall System
- Lessons Learned
- Acknowledgments & Questions

**Scenario #1**

Cost of PV Glass found in the analysis of Feasibility of PV Curtain Wall System

$$(\$280/\text{sf})(79,000\text{sf}) + (\$1,593,480)$$

$$= \$23,713,480$$

For LEASE same size glass as current system and PV glass replacing exterior framed glass

**Scenario #2**

$$(\$180/\text{sf})(79,000\text{sf}) + (\$1,593,480)$$

$$= \$15,813,480$$

For smaller glass and PV glass replacing exterior framed glass

**Scenario #3**

$$(\$180/\text{sf})(79,000\text{sf}) = \$14,220,000$$

For smaller glass and manufacturing framed glass

Not same as framed glass

$$22,000\text{sf of metal studs} = \$18/\text{sf}$$

$$(\$14,220,000) + (\$18/\text{sf})(25,000\text{sf}) = \$14,670,000$$

## Schedule / Cost Impacts

- Current System for the purpose of this analysis is roughly \$20 million dollars
- This price only includes the following
  - Price of the glass
  - Aluminum Extrusions
  - Steel Structure supports
  - Gaskets and Silicone
  - Hoisting
  - Installation

- Scenario #1 is approximately \$3,713,480 more expensive than the current system
- Scenario #1 is Proposed system because it has the least amount of Architectural Impacts
- Smaller glass size should be considered though
  - Reduce Current \$2.65 million dollar cost for packaging and shipping
  - Reduce lead time by about 2 weeks

## Feasibility of PV Curtain Wall

<u>SOLAR GLASS</u>	THE GLASS PRODUCES 140 W/m <sup>2</sup> OF ENERGY
TOTAL SF = 18,930	
= 1,762.4 m <sup>2</sup>	
$(140 \text{ W/m}^2)(1,762.4 \text{ m}^2) = 246,736 \text{ watts/day}$	
= 10,280.67 watts/hr	
= 10.281 kw/hr	
1 year = 8760 hours	= 90,061.56 kw-hr + year

**Requires**

- (3) – 68.4 kW Inverters
- (1) – 49.6 kW Inverter
- 900' of DC wire
- 345' of AC wire

25	0.1666	10.281	8,760.00	60,791.55	75,494.64	1,851,932.40

SOLAR GLASS THE GLASS PROVIDES 140<sup>1/2</sup> ft<sup>2</sup> OF ENERGY

TOTAL SF = 18,970  
= 1,762.4 m<sup>2</sup>

$(140 \frac{1}{2} \text{ ft}^2) (1,762.4 \text{ m}^2) = 246,736 \text{ kWh/yr/ft}^2$   
= 10,280.67 kWh/ft<sup>2</sup>  
= 10,281 kWh/ft<sup>2</sup>

1 year = 8760 hours  
cost = \$0.132/ft<sup>2</sup>/hour  
cost of energy produced in 1st year  
COST OF SYSTEM =  $(\$20/\text{ft}^2) (18,970 \text{ ft}^2) = \$379,400$

FEDERAL TAX CREDIT OF 30%  
 $(\$379,400) (0.3) = \$113,820 = \text{TOTAL SYSTEM COST}$

STATE TAX CREDIT/year =  $\$0.675/\text{kWh}$   
 $(\$0.675/\text{kWh}) (10,281 \text{ kWh}) = \$6,910.53 \text{ savings per year}$

Year 21 TOTAL SAVINGS TO DATE = \$1,552,698.81  
Year 22 TOTAL SAVINGS TO DATE = \$1,628,821.76

FROM INTERPOLATION, THIS SYSTEM WILL BE PAID OFF IN 21.50 YEARS, A LITTLE LESS THAN 21 YEARS AND 6 MONTHS.

### Justification for Cost

- Current PV Trays above atrium skylight cost about \$2 million dollars
  - Produce 85 kW or 68 kWh
- Schuco E<sup>2</sup> system produces just over 3.6 times as much energy
- Schuco system only costs 13.8% more money

## Feasibility of PV Curtain Wall

Year	Energy Cost per kWh	Energy Produced per Hour	Hours per Year	State Tax Credit Per Year	Total Savings Per Year	Total Savings To Date

SOLAR GLASS THE GLASS PROVIDES 140 W/m<sup>2</sup> OF ENERGY  
 TOTAL SF = 15,970  
 = 1,762.4 m<sup>2</sup>  
 $(140 \text{ W/m}^2)(1,762.4 \text{ m}^2) = 246,736 \text{ Watts/Year}$   
 $= 10,280.67 \text{ kWh/Year}$   
 $= 10,281 \text{ kWh/Year}$   
 1 year = 8760 hours  
 $\text{Cost} = \$0.10/\text{kWh}$   
 $\text{Cost of Energy Produced in 15 Year Period}$   
 $\text{Cost of System} = (\$20/\text{kWh})(10,280.67) = \$2,056,134$   
 FEDERAL TAX CREDIT OF 30%  
 $(\$2,056,134)(0.3) = \$616,840 = \text{TOTAL SYSTEM COST}$   
 STATE TAX CREDIT/year = \$616,840/15  
 $(\$616,840/15)(10,280.67 \text{ kWh}) = \$4,153,553 \text{ Savings per year}$   
 Year 21 TOTAL SAVINGS TO DATE = \$1,552,698.31  
 Year 22 TOTAL SAVINGS TO DATE = \$1,628,821.07  
 FROM INTERPOLATION, THIS SYSTEM WILL BE PAID OFF IN 21.50 YEARS. A LITTLE LESS THAN 21 YEARS AND 6 MONTHS.

Michael Gallagher  
 AE Senior Thesis 2011

Construction Management  
 Advisor: Dr. Riley

- Project Background
- Analysis #1: Bringing BIM Into the Field
- Analysis #2: Alternative Curtain Wall Systems
- Analysis #3 : Feasibility of PV Curtain Wall System
- **Lessons Learned**
- Acknowledgments & Questions

## Lesson Learned

### Analysis #1:

- Implementing new software and technology can save time, reduce costs, improve communication, and improve the overall construction process

### Analysis #2:

- There is a substantial premium for large glass sizes
- Curtain wall systems are becoming more and more efficient and more feasible to implement components like PV into them.

### Analysis #3

- Tax rebates and incentives make PV glass affordable
