Building Systems Summary

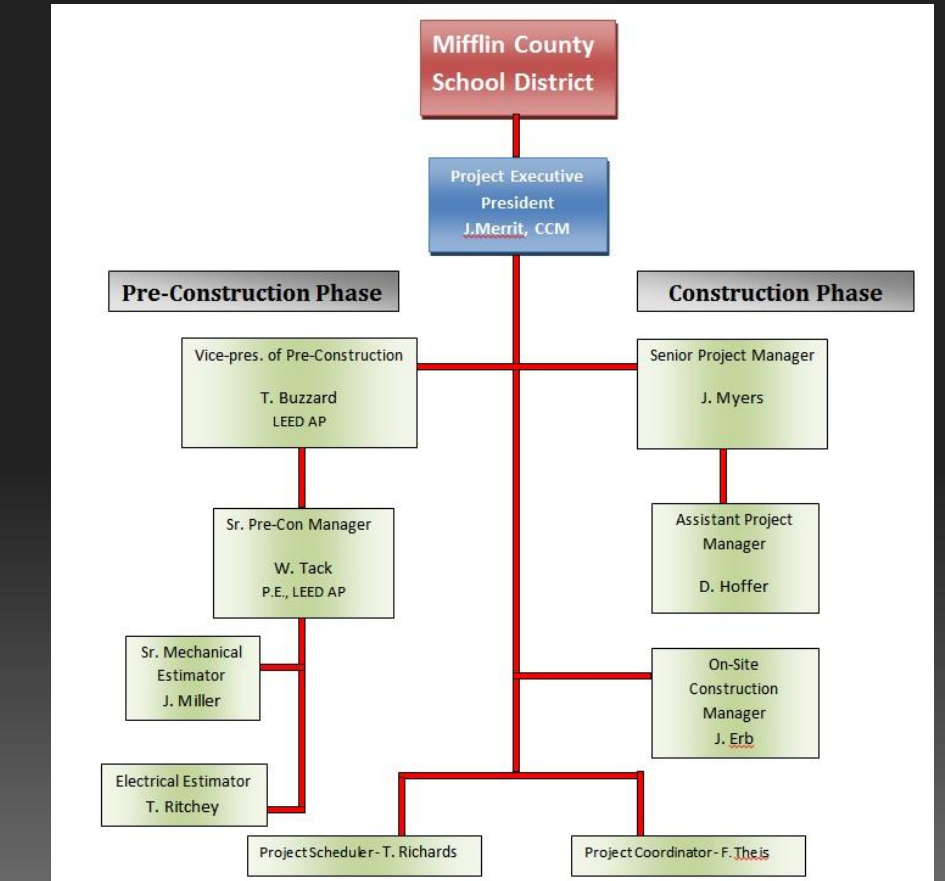

Building System Checklist		
Yes	No	Work Scope
	x	Demolition
x		Structural Steel
x		Cast-in-Place Concrete
x		Precast Concrete
x		Mechanical System
x		Electrical System
x		Masonry
x		Curtain Wall
x		Excavation Support

MAJOR BUILDING SYSTEMS		
System	Actual	Per SF
Electrical	\$5,084,613.23	\$20.10
Mechanical	\$9,046,322.00	\$36.03
Plumbing	\$1,999,304.00	\$7.96
Masonry	\$7,213,821.00	\$28.73
Concrete	\$2,449,238.00	\$9.75
Structural	\$4,652,897.00	\$18.53

Problem Identification:

- Few sustainable techniques pursued in project
- Life span of building ideal for photovoltaic system

Research Goal:

- Perform preliminary design of a building integrated PV system
- Determine financial feasibility of system
- Maximize solar energy generation with available roof space
- Reduce energy costs for IVHS

Case Study: Northwestern Regional No. 7, Winstead, Connecticut

- 250,000SF High School
- 2,000 panel, 40,000SF system
- 445.5kW system
- 3.72 Sun Hours per Day

System Benefits

- Rising Cost of Electricity
- Public/Private Partnership Agreement
- \$25,000 savings in year one
- Received \$1.72 million grant from Connecticut Clean Energy Fund

Short Interval Production Scheduling

Presentation Outline

- I. Introduction
- II. Project Background
- III. Analysis #1: Photovoltaic Array System
- IV. Analysis #2: Short Interval Production Schedule**
- V. Analysis #3: Geothermal Loop Conversion
- VI. Summary of Conclusion
- VII. Acknowledgements

Conclusions and Recommendations

- Activity Durations shortened by estimated 2-3 weeks
 - Reduces General Conditions Costs
 - Delays and Stoppages can be accounted for
- Potential for Early Project Completion
 - Avoid Liquated Damages
- Schedule can be Utilized as Visual Tool
 - Extremely Predictable
 - Easy to Communicate
 - Easy to Track

Average Room Quantity Take-Offs									
Line Number	Material	Material Description	Quantity	Unit	Crew	Mult.	Daily Output	Total Duration	SIPS Duration
09250.015	Gypsum Wall Board	3/8" thick on wall	1068	SF	2	1	2000	0.53	1

Geothermal Loop Conversion

Presentation Outline

- I. Introduction
- II. Project Background
- III. Analysis #1: Photovoltaic Array System
- IV. Analysis #2: Short Interval Production Schedule
- V. Analysis #3: Geothermal Loop Conversion**
- VI. Summary of Conclusion
- VII. Acknowledgements

Problem Identification

- The New Indian Valley High School was designed with a 220 ton vertical closed loop mechanical system that experienced installation/construction delays due to unforeseen limestone at deep vertical depths

Research Goal

- The goal of the research is to investigate the feasibility of the re-orientation of the current 2 field vertical design to a hybrid vertical-horizontal, or full horizontal design. The investigation will look into the financial benefit to alternative design scenarios along with system efficiency.

Geothermal Loop Conversion

Presentation Outline

- I. Introduction
- II. Project Background
- III. Analysis #1: Photovoltaic Array System
- IV. Analysis #2: Short Interval Production Schedule
- V. Analysis #3: Geothermal Loop Conversion**
- VI. Summary of Conclusion
- VII. Acknowledgements

System Layout

- The current vertical loop design consists of 2 well fields (525' depth)
 - 120' x 135'
 - 120' x 100'

Vertical Installation Costs

- Vertical Close Loop Systems: ~ \$2,400/ton installed based on depth
- 525' considered "deep" well depth

$$2400 * (220) = \$528,000 \text{ installed (not including delays)}$$

Geothermal Loop Conversion

Presentation Outline

- I. Introduction
- II. Project Background
- III. Analysis #1: Photovoltaic Array System
- IV. Analysis #2: Short Interval Production Schedule
- V. Analysis #3: Geothermal Loop Conversion**
- VI. Summary of Conclusion
- VII. Acknowledgements

Useable Land Constraints

- 41 acre site
- Horizontal installation not recommended for underneath paved surfaces

Vertical System Installed Area

- 250 SF per borehole (ton), 55,000 SF @ 220 ton

Horizontal System Installed Area

- 2500 SF per ton, 550,000 SF @ 220 ton

Geothermal Loop Conversion

Presentation Outline

- I. Introduction
- II. Project Background
- III. Analysis #1: Photovoltaic Array System
- IV. Analysis #2: Short Interval Production Schedule
- V. Analysis #3: Geothermal Loop Conversion**
- VI. Summary of Conclusion
- VII. Acknowledgements

Hybrid Combination System

- One Vertical Well from current design
 - 120' x 100' (100 ton)
- One mini-HDD (Horizontal Directional Drilled)
 - 120' x 135' (120 ton)

Hybrid Combination System Costs

- 100 ton * (\$2,900) = \$290,000
- 120 ton * (\$1,900) = \$228,000

$$\$290,000 + \$228,000 = \$468,000$$

$$\$538,000 - \$468,000 = \mathbf{\$70,000}$$

Geothermal Loop Conversion

Presentation Outline

- I. Introduction
- II. Project Background
- III. Analysis #1: Photovoltaic Array System
- IV. Analysis #2: Short Interval Production Schedule
- V. Analysis #3: Geothermal Loop Conversion**
- VI. Summary of Conclusion
- VII. Acknowledgements

Efficiency of Vertical vs. Horizontal Loops

- Average Ground temperature constant after 30 feet
- Normal Horizontal trenches installed between 4-9 feet
- Ground Temperatures can fluctuate between 5-10 degrees (based on day)

Horizontal Closed Loop Systems

- Potentially require more energy input as same size vertical system

Mini-HDD

- Installed into ridge to avoid excess excavation
- Minimal loss of efficiency due to sloping ridge line

Indian Valley High School
Lewistown, PA

Ryan Korona | Construction Management

Geothermal Loop Conversion

Indian Valley High School
Lewistown, PA

Ryan Korona | Construction Management

Presentation Outline

- I. Introduction
- II. Project Background
- III. Analysis #1: Photovoltaic Array System
- IV. Analysis #2: Short Interval Production Schedule
- V. Analysis #3: Geothermal Loop Conversion**
- VI. Summary of Conclusion
- VII. Acknowledgements

Conclusions and Recommendations

- Higher mechanical system efficiency retained
- Higher energy input not significant due to mini-HDD installation
- Potential Savings of \$70,000 from installation alone

Implement Hybrid Well Field Design

Lessons Learned

Presentation Outline

- I. Introduction
- II. Project Background
- III. Analysis #1: Photovoltaic Array System
- IV. Analysis #2: Short Interval Production Schedule
- V. Analysis #3: Geothermal Loop Conversion
- VI. Lessons Learned**
- VII. Acknowledgements

Analysis #1: Photovoltaic Array System

- Perform Feasibility study early in design process
- Rebates/Incentives available to make systems more affordable
- PPA provide means of payment and maintenance

Analysis #2: Short Interval Production Scheduling

- Repetitive Schedules allow efficient work at high quality
- Reduction of overall project schedule and generate savings

Analysis #3: Geothermal Mechanical System Conversion

- Vertical Wells necessary where land space is limited
- Horizontal Wells nearly half the cost of installation
- Both provide highly efficient alternatives to traditional systems

Acknowledgements

Presentation Outline

- I. Introduction
- II. Project Background
- III. Analysis #1: Photovoltaic Array System**
- IV. Analysis #2: Short Interval Production Schedule
- V. Analysis #3: Geothermal Loop Conversion
- VI. Summary of Conclusion
- VII. Acknowledgements

PV POWERED™ RESIDENTIAL/COMMERCIAL INVERTERS		SOLARON® COMMERCIAL/UTILITY INVERTERS					
PROJECT SPECIFICATIONS		MODULE SPECIFICATIONS					
Module Manufacturer Sanyo	Temperature Scale <input checked="" type="radio"/> Fahrenheit <input type="radio"/> Celsius	Manufacturer: Sanyo Model: HIT-195					
Module Model # HIT-195	Correction Factor NEC (2008)	STC Watts 195 watts	VOC Temp Coefficient -0.17V/Deg C				
Mounting Type <input checked="" type="radio"/> Roof <input type="radio"/> Ground <input type="radio"/> Pole	Local Temperature Range from 0 to 110	PTC Watts 185.3 watts	Max Power Temp Coefficient n/a				
Filter Inverter List <input checked="" type="radio"/> Current <input type="radio"/> Discontinued	Inverter PVP 100K-480V	VOC 68.1 VDC	Coldest Day VOC 80.4 VDC				
		VMP 55.3 VDC	Warmest Day VMP 106.2 VDC				
		IMP 3.53 A					
INVERTER SPECIFICATIONS:							
Maximum DC Input Voltage	600 V	Continuous Power Output	100000 W				
DC Peak Power Tracking Range	295 - 500 V	Weighted CEC Efficiency	96 %				
DC IMP Nominal Current	356 A	AC Nominal Voltage	480 V				
		AC Operating Range	422 - 528 V				
		AC Frequency	60 Hz				
		AC Maximum Continuous Current	120 A				
STC Watts	PTC Watts	Inverter AC Watts	STC VOC	Coldest Day VOC	STC VMP	Warmest Day VMP	STC IMP
64,155 W	60,963 W	58,525 W	477 VDC	563 VDC	388 VDC	335 VDC	165.91 A
