Senior Thesis is a great way to learn real world applications. For this entire year I have spent analyzing a student center and implementing ways to improve the mechanical systems. This year has by far been the most interesting and beneficial year I have spent studying in college. In my opinion the design studios need to be redesigned and retrofitted to a system much like the senior thesis. This will provide for an even greater learning experience. Although this year was certainly challenging, the learning experiences I have gained will be crucial as I continue my career as an Architectural Engineer.
