

## Final Presentation Outline

- |  |  | <b>Slide Count Summary</b> |
|--|--|----------------------------|
| <b>I. Building Overview</b>              | Three slides for introduction to project   | Introduction - 5           |
| <b>II. Existing Mechanical System</b>    | Two slides for exposure to existing mechanical system  | Depth - 9                  |
| <b>III. Mechanical Depth Design</b>      | One slide to introduce proposed redesign   | Breadth 1 – Electrical - 4 |
| <b>IV. Demand Control Ventilation</b>    | Two slides to explain investigation of demand control ventilation advantages                               | Breadth 2 – CM - 4         |
| <b>V. Mechanical Design Alternatives</b> | Two slides discussing proposed design alternatives   | Conclusions - 2            |
| <b>VI. Energy and Cost Analyses</b>      | Four slides discussing energy & cost of design alternatives as well as final selection and system diagrams | Total = 24 + appendix      |
| <b>VII. Breadth 1 – Electrical Study</b> | Four slides to discuss analysis of a photovoltaic array  |                            |
| <b>VIII. Breadth 2 – CM Study</b>        | Four slides to discuss highlights of construction management study   |                            |
| <b>IX. Conclusions</b>                   | One slide to reiterate design selection and recommendations  |                            |
| <b>X. Acknowledgements</b>               | One slide  |                            |
| <b>XI. Appendix</b>                      | Additional Slides For Reference – number to be determined at a later date.                                 |                            |

\*Sample Slides from the presentation follow for reference.

## Schedule

### Building Overview

- Existing Mechanical System
- Mechanical Depth Design
  - Demand Control Ventilation
  - Mechanical Design Alternatives
  - Energy & Cost Analyses

Breadth 1 – Photovoltaic Array Study

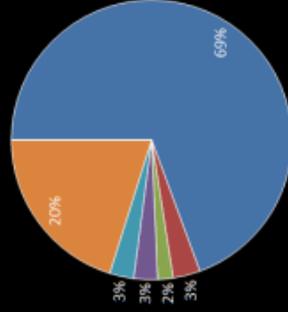

Breadth 2 – CM Study

Conclusions

Acknowledgements

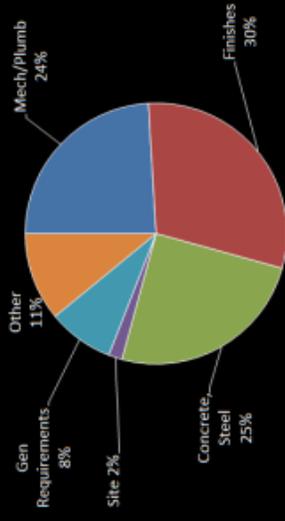

Laura Pica – Mechanical Option - Adviser – Stephen Isalado.

## Building Loads

- sensible solar gain (Btu/h)
- sensible glass transmission (Btu/h)
- sensible wall transmission (Btu/h)
- sensible lighting load (Btu/h)
- Sensible People load (Btu/h)
- sensible Misc equipment (Btu/h)

## Project Cost Breakdown

## Schedule

### Building Overview

- Existing Mechanical System
- Mechanical Depth Design
  - Demand Control Ventilation
  - Mechanical Design Alternatives
  - Energy & Cost Analyses

Breadth 1 – Photovoltaic Array Study

Breadth 2 – CM Study

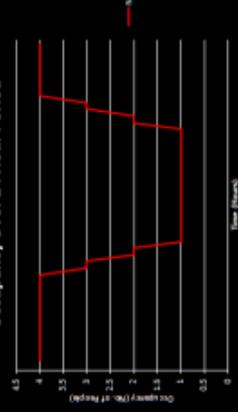

Conclusions

Acknowledgements

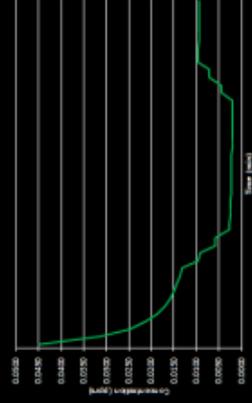

Laura Pica – Mechanical Option - Adviser – Stephen Isalado.

## Demand Control Ventilation

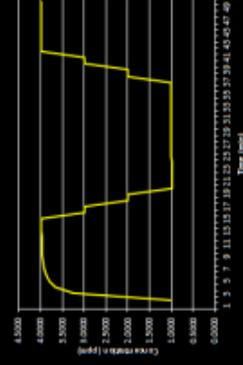

### Occupancy Over 24 Hour Period

### Natural Ventilation with Constant A/Cs

### Demand Control Ventilation

$$c(t+\Delta t) = c(t) + eA(-n^* \Delta t) + (cb + (N^*q)/(n^*V)) * (1 - e^{-n^* \Delta t})$$

## Schedule

Building Overview  
Existing Mechanical System  
Mechanical Depth Design  
Demand Control Ventilation

### Mechanical Design Alternatives

Energy & Cost Analysis

Breadth 1 – Photovoltaic Array Study

Breadth 2 – CM Study

Conclusions

Acknowledgements

Laura Pica – Mechanical Option - Adviser – Stephen Izado.

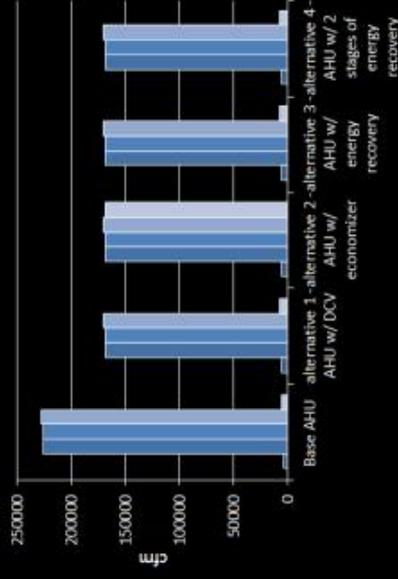

The four design alternatives studied

- Base AHU
- AHU w/ DCV
- AHU w/ DCV and Economizer
- AHU w/ DCV and 1 Stage of Energy Recovery via Fixed Plate HX (OA Preconditioning)
- AHU w/ DCV and 2 Stages of Energy Recovery: Fixed Plate HX & Runaround Coil Loop

### Operation at Design Capacity

### Design Airflow

## Schedule

Building Overview  
Existing Mechanical System  
Mechanical Depth Design  
Demand Control Ventilation  
Mechanical Design Alternatives  
Energy & Cost Analysis

Breadth 1 – Photovoltaic Array Study

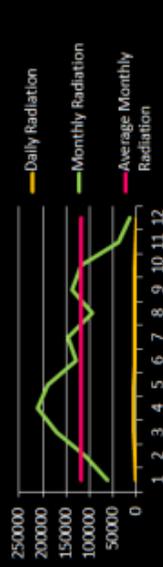

Breadth 2 – CM Study

Conclusions

Acknowledgements

Laura Pica – Mechanical Option - Adviser – Stephen Izado.

### Annual Solar Radiation

### Electric Output

$\beta$	Monthly Electric Output
0	1.401E+18
5	1.389E+22
10	9.904E+20
15	4.487E+20
20	1.722E+20
25	3.564E+20
30	1.177E+24
35	1.044E+21
40	6.104E+20
45	3.497E+20
