CONSULTING STRUCTURAL ENGINEERS

## CIVIL / STRUCTURAL ENGINEERS

- If you want to get lost among 50 or 100 other engineers in a firm, then we are **Not** for you.
- If you want to produce good work only to see the senior engineer in your division take credit for your work, then we are **Not** for you.
- If you want to be three or four layers removed from the management of the company so that the company president doesn't know your name, then we are **Not** for you.
- If you want to be hidden in the back room assigned to perform calculations with no interaction with the client or the contractor who is building your work, then we are **Not** for you.

## WHO ARE WE?

We are a midsize structural engineering firm located in the Washington D.C. area, one of the fastest growing metropolitan areas in the country. Our office is located only two blocks from a subway station for easy commuting. The firm's clients include some of the largest building developers and architects in the area. Major areas of practice include the design of commercial buildings, all areas of renovation and alteration of buildings and repair of existing structures. If you demonstrate ability you will be given responsibility and experience to develop and grow your strengths. We offer an opportunity to get experience in all aspects of engineering projects, including the design phase while interacting with architects and building owners, and the construction phase where you can see your work come to life.
