Presents

Exploring the Relationships between Transparency, Process Mapping, and Sustainable Building Delivery

Leidy Klotz

Transparency is recognized as valuable in sustainable building delivery. Process mapping is recognized as facilitating transparency. Through study of ongoing process mapping and sustainable building delivery at Penn State's Office of the Physical Plant (OPP), greater understanding of the relationship between transparency, sustainable building delivery, and process mapping can be acquired. This enhanced understanding will benefit the building industry, and particularly the growing sustainable building market sector. This presentation will outline the current status of the research at OPP, sharing developed process maps and discussing potential value for all Architectural Engineering disciplines. In addition, the planned next steps of the research will be presented.

Next Lecture: Sinem Korkmaz
"High Performance Green
Building Delivery"
Thursday, March 22
12:00- 1:00 P.M.

**Thursday, February 22,
12:00- 1:00 P.M.
107 Engineering Unit B**

Sponsored by the Department of
Architectural Engineering.
