Homework: There will be 10 graded homework assignments during the semester. Problems will be submitted by Monday at noon by fax or email. Late homework will not be accepted unless arrangements have been made before the due date. You need to either scan your work or fax it in so that the instructor can see your method of calculation and your circuit diagrams.

Quizzes: There will be 10 on-line quizzes. The format is to enter a numerical answer, with a 10 minute time limit. You may take the quiz multiple times with only your highest score being counted toward your grade. The quiz will be open for a limited time in which you will be graded. After this period, you can take the quiz for practice, but the score will not count toward your grade. These quizzes do serve as a good source of problems for studying for the exams.

Midterm & Final: The exams are closed book, closed notes. You are allowed to use a calculator and the equation sheet that comes with the exam. You need to show all steps until you use your calculator to receive credit. Labeling of diagrams is a must if you have a wrong answer and wish to receive partial credit.

Proctors: You will be required to find a proctor or proctors that will administer the midterm and final exams. A more detailed proctor information sheet will be with your course materials.

Course Site: The ANGEL course Web site will have assignments and solutions for homework as-well-as quizzes and other resources. It is recommended that you check this site regularly to see notices and announcements.

Email: During the semester, assignments and announcements are regularly distributed via Angel. All email to the instructor should be sent through Angel. Be sure to set your forwarding address in Angel so you get your correspondence in a timely fashion. An important component in this course is your communication with the instructor.
