## Project Overview

Analysis 1: Exterior Façade Redesign

Analysis 2: Solar Redesign

BIM Implementation

Conclusions

Questions

### Client Information

- Chestnut Hill Academy was established in 1861
- Located in Philadelphia, PA
- K-12 Boys College Preparatory School
- Enrolls approximately 600 students

### Project Team

- GC - Turner Construction
- Architect – Lilley.Dadagian
- Owners Rep. – Aegis Property Group
- Structural Eng. – Roome & Guarracino
- Civil Eng. – Cairone & Kaupp, Inc.
- MEP Eng. – Bruce E. Brooks & Assoc.

LILLEY.DADAGIAN  
ARCHITECTS

## Project Overview

Analysis 1: Exterior Façade Redesign

Analysis 2: Solar Redesign

BIM Implementation

Conclusions

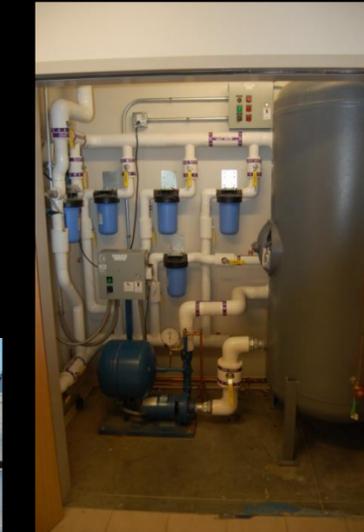

Questions

### Science & Technology Center:

- 2.5 stories with ½ story mechanical attic
- 26,870 SF
- LEED Silver Certified
- Classrooms
- Science Laboratories
- Faculty Offices

### Sustainable Design

- PV panels
- Thermal Heat Conductors
- Wind Turbine
- Greywater System
  - Raingardens
  - Permeable Parking Lot
- Tree Arboretum

# Science & Technology Center Chestnut Hill Academy

## Project Overview

Analysis 1: Exterior Façade Redesign

Analysis 2: Solar Redesign

BIM Implementation

Conclusions

Questions

### Project Cost:

- \$9,600,000

### Construction Information:

- Start Date: November 2007
- 12 Month Construction Schedule
- Structural steel frame
- Stucco and Stone veneer

| Building System Cost         | Total        | SF       |
|------------------------------|--------------|----------|
| Concrete                     | \$ 424,600   | \$ 15.80 |
| Steel                        | \$ 744,600   | \$ 27.71 |
| Drywall                      | \$ 713,000   | \$ 26.54 |
| HVAC and Plumbing            | \$ 1,543,700 | \$ 57.45 |
| Electrical                   | \$ 866,800   | \$ 32.26 |
| Fire Protection              | \$ 109,300   | \$ 4.07  |
| Roofing                      | \$ 550,700   | \$ 20.49 |
| Masonry                      | \$ 634,900   | \$ 23.63 |
| Glass, Glazing, Curtain wall | \$ 450,800   | \$ 16.78 |

## Exterior Façade Veneer Redesign

## Problem & Goal

Project Overview

Analysis 1: Exterior Façade Redesign

Analysis 2: Solar Redesign

BIM Implementation

Conclusions

Questions

Natural Fieldstone  
Masonry Veneer

**Problem:**

- Long construction time. Material Costs, delay's other schedule activities

**Goal:**

- Speed up construction schedule and decrease material price
- Maintain envelope requirements

# Science & Technology Center Chestnut Hill Academy

## Thermal Load Analysis - Mechanical Breadth

## Green Building Design Studio

Project Overview

Analysis 1: Exterior Façade Redesign

Analysis 2: Solar Redesign

BIM Implementation

Conclusions

Questions

### Green Building Design Studio

- Incorporates building location, size, function, and design into calculations
- Utilizes actual wall material thicknesses to calculate energy load
- Considers room volumes and window sizes for heating and cooling loads

### Process:

- Utilize 3D Revit designed model
- Export to GBDS
- Enter project information ( location, type, energy rates)
- Add special system considerations  
I.E. Occupancy/Daylight sensors
- Adjust specific project equipment (HVAC)
- Run analysis program

## Façade Redesign Recommendations

Project Overview

Analysis 1: Exterior Façade Redesign

Analysis 2: Solar Redesign

BIM Implementation

Conclusions

Questions

### Advantages of Cultured Stone Veneer

Cost savings of 54.6% approx. \$102,000

Schedule acceleration of approx. 6 weeks

Less Site Congestion

50 year warranty

# Science & Technology Center Chestnut Hill Academy

## Solar Energy System Redesign

## Problem & Goal

Project Overview

Analysis 1: Exterior Façade Redesign

Analysis 2: Solar Redesign

BIM Implementation

Conclusions

Questions

Problem Statement:

- Small 1kW capacity
- Invisible to public eye

Goal:

- Redesign the solar system to utilize Building Integrated Photovoltaic's (BIPV)
- Integrate BIPV into Southern exposed roof allowing the shingles to be visible to public, staff, and students
- Utilize more solar energy to offset energy consumption

# Science & Technology Center Chestnut Hill Academy

Project Overview

Analysis 1: Exterior Façade Redesign

Analysis 2: Solar Redesign

BIM Implementation

Conclusions

Questions

## Existing Panel System

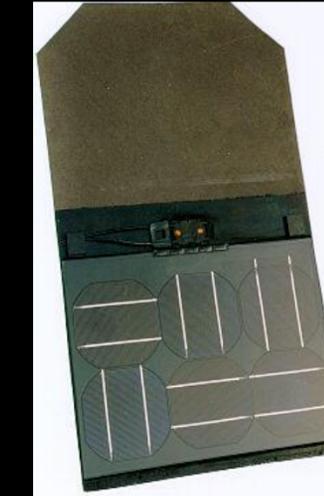

### GEPV-200-M Panel by General Electric

#### Product Description

- Peak power of 200 W of energy produced per panel
- Bracket Mounted above roof
- Grid tied system

## Proposed BIPV Roofing System

### SUNSLATES by Atlantis Energy Systems

#### Product Description

- Peak power of 12.2 W of energy produced per slate
- Mounted directly to roofing substrate and used as building envelope
- Aesthetically pleasing
- Grid tied system

# Science & Technology Center Chestnut Hill Academy

## Installation Process

Project Overview

Analysis 1: Exterior Façade Redesign

Analysis 2: Solar Redesign

BIM Implementation

Conclusions

Questions

### Installation Process:

- SUNSLATESs are mounted on a 1x4 nailers resting on 2x2 sleepers which form a grid anchored to roof deck
- Slates are then attached to the wood battens with storm anchor hooks
- Each tile is then attached to the adjacent tiles by the connecting wires
- At the end of each course a home run is ran to a splice box under the roof deck which is then ran to the inverter.

Questions

### Small Area Design

| Calculated Energy Production for Small Areas of SUNSLATES |           |        |          |          |          |          |          |          |          |        |        |        |
|---|-----------|--------|----------|----------|----------|----------|----------|----------|----------|--------|--------|--------|
| # of Slates   | 231       |        |          |          |          |          |          |          |          |        |        |        |
| Watts/slate   | 12.2      |        |          |          |          |          |          |          |          |        |        |        |
| Month   | Jan       | Feb    | Mar      | Apr      | May      | Jun      | Jul      | Aug      | Sep      | Oct    | Nov    | Dec    |
| Days/month  | 31        | 28     | 31       | 30       | 31       | 30       | 31       | 31       | 30       | 31     | 30     | 31     |
| kWh/day   | 27.28     | 30.15  | 33.54    | 37.20    | 40.30    | 41.99    | 41.43    | 38.61    | 35.23    | 31.28  | 28.18  | 26.49  |
| kWh/month   | 845.69    | 844.33 | 1,039.63 | 1,116.01 | 1,249.31 | 1,259.74 | 1,284.25 | 1,196.89 | 1,056.83 | 969.74 | 845.46 | 821.22 |
| kWh/Year  | 12,529.10 |        |          |          |          |          |          |          |          |        |        |        |

### Small Area System:

# of slates:  
**231**

cost per slate:  
12.2W \* \$15/W  
**= \$183/slate**

Total Cost of Shingle's:  
231 shingles \* \$183/slate  
**= \$42,273**

### Small Area Savings:

Savings Per Year  
12,529kWh/year \* \$0.0753/ kWh  
**= \$943 / year**

Payback Period  
\$42,273 ÷ \$943/year  
**= 44.8 years**

Questions

### Entire Roof Design

| Calculated Energy Production for Entire Roof of SUNSLATES |            |          |           |           |           |           |           |           |           |          |          |          |
|---|------------|----------|-----------|-----------|-----------|-----------|-----------|-----------|-----------|----------|----------|----------|
| # of Slates   | 2365       |          |           |           |           |           |           |           |           |          |          |          |
| Watts/slate   | 12.20      |          |           |           |           |           |           |           |           |          |          |          |
| Month   | Jan        | Feb      | Mar       | Apr       | May       | Jun       | Jul       | Aug       | Sep       | Oct      | Nov      | Dec      |
| Days/month  | 31         | 28       | 31        | 30        | 31        | 30        | 31        | 31        | 30        | 31       | 30       | 31       |
| kWh/Day   | 279.30     | 308.73   | 343.35    | 380.86    | 412.60    | 429.91    | 424.14    | 395.29    | 360.66    | 320.27   | 288.53   | 271.22   |
| kWh/Month   | 8,658.21   | 8,644.36 | 10,643.87 | 11,425.79 | 12,790.53 | 12,897.29 | 13,148.31 | 12,253.87 | 10,819.88 | 9,928.32 | 8,655.90 | 8,407.76 |
| kWh/yr  | 128,274.09 |          |           |           |           |           |           |           |           |          |          |          |

### Entire Roof Area System:

# of shingles:  
**2365**

cost per shingle:  
12.2W \* \$15/W  
**= \$183/shingle**

Total Cost of Shingle's:  
2365 shingles \* \$183/ shingle  
**= \$432,795**

### Entire Roof Savings:

Savings Per Year  
128,274 kWh/year \* \$0.0753/ kWh  
**= \$9,659 / year**

Pay back Period  
\$432,795 ÷ \$9,659/ year  
**= 44.8 years**

## Existing Energy Calculations

## Existing Cost – Savings – Payback Period

Project Overview

Analysis 1: Exterior Façade Redesign

Analysis 2: Solar Redesign

BIM Implementation

Conclusions

Questions

### Existing Solar Panel Design

| Calculated Energy Production for Existing GE Solar Panels |          |        |        |        |        |        |        |        |        |        |        |        |
|---|----------|--------|--------|--------|--------|--------|--------|--------|--------|--------|--------|--------|
| # of Panels   | 5        |        |        |        |        |        |        |        |        |        |        |        |
| Watts/panel   | 200      |        |        |        |        |        |        |        |        |        |        |        |
| Month   | Jan      | Feb    | Mar    | Apr    | May    | Jun    | Jul    | Aug    | Sep    | Oct    | Nov    | Dec    |
| Days/month  | 31       | 28     | 31     | 30     | 31     | 30     | 31     | 31     | 30     | 31     | 30     | 31     |
| kWh/Day   | 9.68     | 10.70  | 11.90  | 13.20  | 14.30  | 14.90  | 14.70  | 13.70  | 12.50  | 11.10  | 10.00  | 9.40   |
| kWh/Month   | 300.08   | 299.60 | 368.90 | 396.00 | 443.30 | 447.00 | 455.70 | 424.70 | 375.00 | 344.10 | 300.00 | 291.40 |
| kWh/yr  | 4,445.78 |        |        |        |        |        |        |        |        |        |        |        |

#### Existing System:

# of panels:  
5

cost per panel:  
\$1235.29/panel

Total Cost of Panel's:  
5 panels \* \$1,235.29  
= \$6,176

#### Existing Panel's Savings:

Savings Per Year  
4,445.78kWh/year \* \$0.0753/ kWh  
= \$335 / year

Payback Period  
\$6,176 ÷ \$335/year  
= 18.4 years

# Science & Technology Center Chestnut Hill Academy

## Summary

## Recommendations

Project Overview

Analysis 1: Exterior Façade Redesign

Analysis 2: Solar Redesign

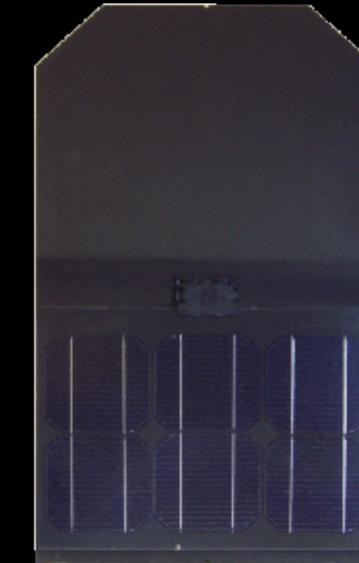

BIM Implementation

Conclusions

Questions

|             | kWh/yr   | Cost Savings / yr | System Cost | Payback Period |
|-------------|----------|-------------------|-------------|----------------|
| Existing    | 4,445.78 | \$335             | \$6,176     | 18.4 years     |
| Small Area  | 12,529   | \$943             | \$42,273    | 44.8 years     |
| Entire Roof | 128,274  | \$9,659           | \$432,795   | 44.8 years     |

- Proposed system is extremely costly, Inefficient , and has potential delays
- Small Area system has high initial cost but can be feasible with energy grants
- Entire Roof system is unfeasible due to extreme initial investment
- Existing system is cheapest , fastest, and has an easy installation

Analysis 2: Solar Redesign

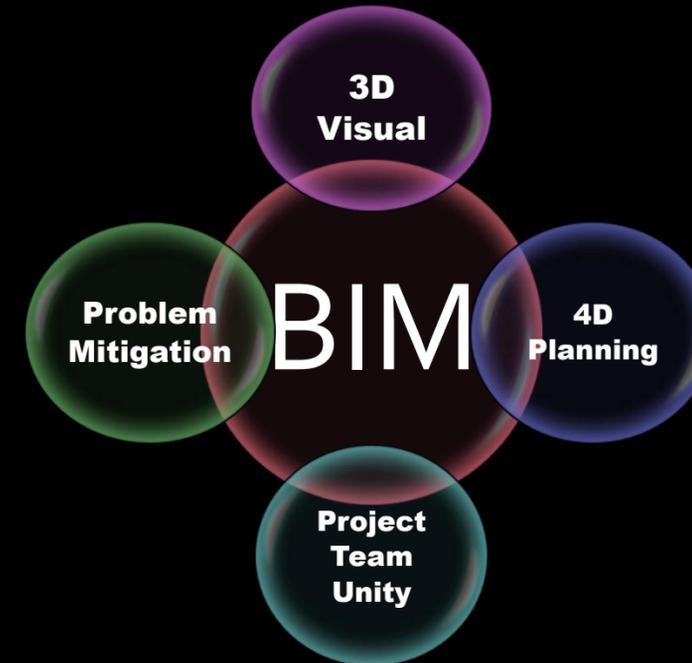

BIM Implementation

Conclusions

Questions

Building Information Modeling

Problem & Goal

Problem:

The Science & Technology Center did not fully use BIM, which could have been an extremely valuable asset to the project.

Goal:

- Identify the benefits of BIM on projects
- Develop an understanding of the basic process used to create things such as the 3D and 4D models
- Gain an understand of why it was not used on the project

# Science & Technology Center Chestnut Hill Academy

## BIM Process

## BIM Software

Project Overview

Analysis 1: Exterior Façade Redesign

Analysis 2: Solar Redesign

BIM Implementation

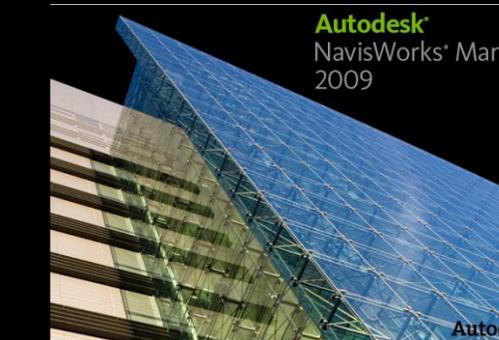

Conclusions

Questions

Typical process for implementing BIM

1. Contact a design service which creates BIM models & explain the project
2. Send the design firm drawings/designs to allow them to become familiar with the project design and layout
3. Design firm will contact architect/engineers for clarifications
4. Once clarifications are received the design firm will develop a quote
5. Once the agreement is reached the design firm will begin creation of preliminary models/drawings
6. Preliminary models/drawings are sent to owner for approval
7. Once approved the models/drawings will be finalized and given one last check for Quality and Consistency

The following software titles were used to gain the understanding of the creation of the BIM 3D & 4D models

# Science & Technology Center Chestnut Hill Academy

## 3D Model Design

## Revit Output

Project Overview

Analysis 1: Exterior Façade Redesign

Analysis 2: Solar Redesign

BIM Implementation

Conclusions

Questions

### 3D Model Benefits

- Visualization
- Express Changes
- Work Flow Management
- Construction Clarification
- Phasing

### Important Considerations

- In-depth understanding of CD's
- Attention to detail
- The more accurate your measurements results in a better quality model
- 3D model will later impact quality of the 4Dmodel

# Science & Technology Center Chestnut Hill Academy

## 4D Model Design

## NavisWorks 4D Model

Project Overview

Analysis 1: Exterior Façade Redesign

Analysis 2: Solar Redesign

**BIM Implementation**

Conclusions

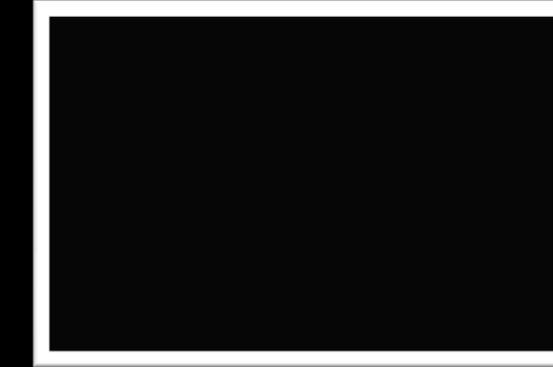

Questions

### 4D Model Benefits

- Adds time dimension to 3D
- Visualize time constraints
- Sequencing and Phasing
- Contractor Flow
- Improved Schedule Efficiency

### Important Considerations

- Time consuming attaching each individual member to a schedule task
- Detailed project schedule allows for a more accurate 4D model
- Ensure 3D Model is 100% finalized before beginning 4D model

# Science & Technology Center Chestnut Hill Academy

## Project Team – BIM Survey Results

## Project Team – BIM Survey Results

Project Overview

Analysis 1: Exterior Façade Redesign

Analysis 2: Solar Redesign

**BIM Implementation**

Conclusions

Questions

### Architect Interview Results:

- Utilized 3D model with Rhino software for massing issues
- Small Architecture firm which cannot afford BIM software and training
- Would later adopt BIM technology once the technology has the “bugs” worked out
- Believed that use full use of BIM would not have been warranted for a project of this scale. Would be better used on more complex projects

### Project Manager Interview Results:

- Limited training with BIM technology
- Believes it would aid with trade coordination and minimize confusion
- Steel erectors utilized 3D model for steel erection from StruWalker software
- Cost savings from BIM on a project of this size would not be worth the cost of training and model production

# Science & Technology Center Chestnut Hill Academy

## Recommendation

Project Overview

Analysis 1: Exterior Façade Redesign

Analysis 2: Solar Redesign

**BIM Implementation**

Conclusions

Questions

### BIM Implementation

- The use of this technology could benefit the project in numerous ways, but due to the lack of training and budget of the project team. It is better left at the current amount.

# Science & Technology Center Chestnut Hill Academy

## Conclusions

Project Overview

Analysis 1: Exterior Façade Redesign

Analysis 2: Solar Redesign

BIM Implementation

Conclusions

Questions

### Exterior Façade Redesign

- Cost and Schedule reduced
- Thermal & Mechanical was not impacted

### Solar Energy System Redesign

- Proposed system is very expensive with a long payback period
- Installation of proposed system is labor intensive
- Schedule delay due to intensive labor
- Existing system is a better fit for the project

### BIM Implementation

- BIM Technology has potential to improve any project but comes at a cost
- Industry members are aware of BIM but lack training or budget to implement
