Project Background

Location:

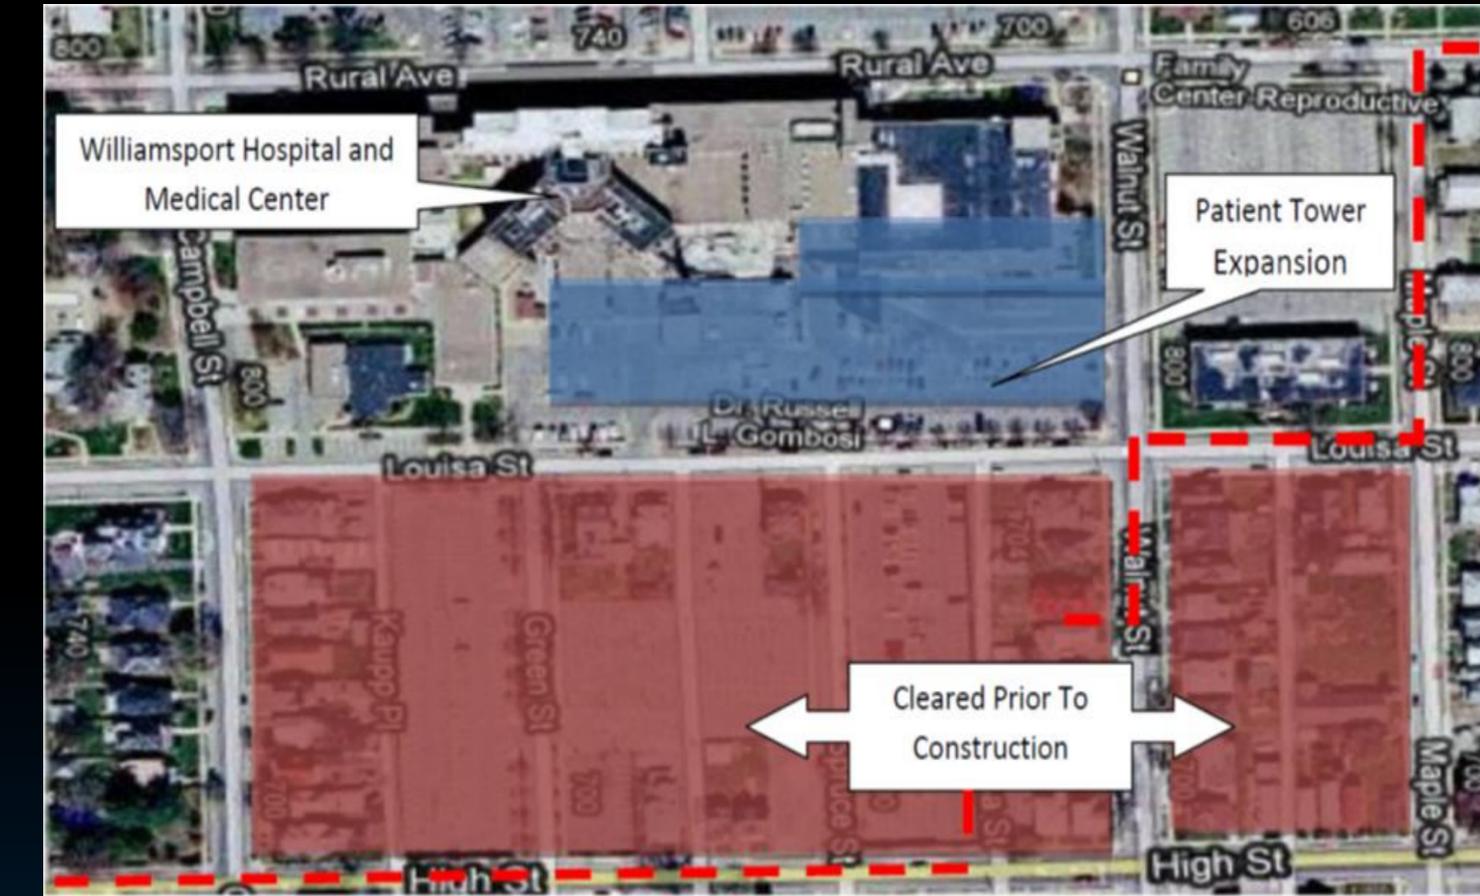

*777 Rural Avenue, Williamsport, PA
Williamsport Hospital and Medical Center*

Design:

*Gross Building Area- 243,000 SF
Construction Type- Hospital Addition*

Construction:

*Delivery Method- Design-Bid-Build
GMP Amount- \$82,297,101
Construction Dates- 10/22/2009 – 9/19/2012*

PRESENTATION OUTLINE:

Problem Identification

Problem Identification

Due to weather and other delays the watertight milestone was in jeopardy of being hit.

Mobile cranes forced Walnut Street to be closed down for entire project

Research Goal

Use a tower crane to reduce schedule and reduce overall costs through schedule savings

Keep Walnut Street open

Validate tower crane initial costs with income evaluation

Tower Crane Analysis

VS

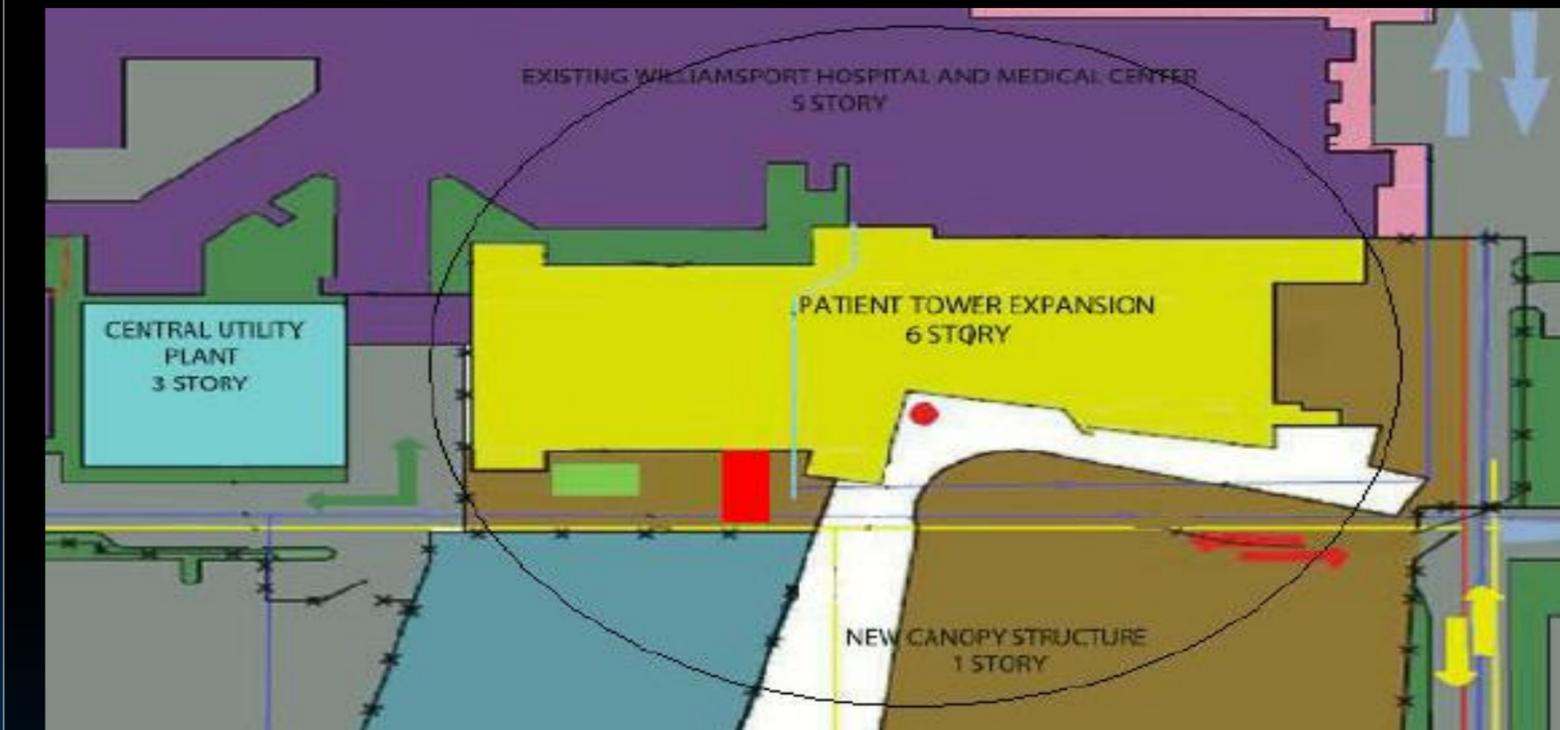

PRESENTATION OUTLINE:

 - I. Design
 - II. Cost Impacts/Payback Period
- V. Lessons Learned and Recommendations
- VI. Acknowledgements

Site Logistics Impacts

- Walnut Street can be open
- Waste Container will need to be moved to allow for material/man hoist
- Tower Crane will allow more organized steel shakedown areas

Tower Crane Analysis

PRESENTATION OUTLINE:

- I. Project Background

Schedule Savings

Methodology

RS Means is an inaccurate way of estimating productivity

Use Milton Hershey Children's Hospital project to analyze tower crane productivity

Both projects are being constructed by L.F. Driscoll

Both projects have same size steel crew

Both are healthcare projects similar in size

Both projects have similar structures

Tower crane was used due to site restrictions

Tower Crane Analysis

PRESENTATION OUTLINE:

- I. Project Background

Cost Impacts

Tower Crane Analysis

Tower Crane vs. Mobile Crane

Crane Type	Duration Used	Crane Cost	Mobile vs. Tower
165 ton Demag AC120	6.5 months	\$335,500	\$978,500
240 Ton Liebherr LTM 1200	10 months	\$750,000	
Potain Model HDT 180 Ton	16 months	\$1,038,500	\$1,033,500

Material/Man Hoist

Concrete Pad and Removal	\$1,5000
Erection and Dismantle	\$25,000
Rental	\$120,000
Labor	\$224,000
Electrical and Carpentry	\$20,000
Total	\$404,000

Total Additional Costs \$464,000

PRESENTATION OUTLINE:

- I. Project Background
- II. Analysis 1: Shift from Mobile Crane to Tower Crane
 - I. Site Logistic Impacts
 - II. Productivity and Schedule Impacts
 - III. Cost Impacts

 - I. Design
 - II. Cost Impacts/Payback Period
- V. Lessons Learned and Recommendations
- VI. Acknowledgements

Conclusions and Recommendations

Tower Crane only reduced schedule by 6 work days

Walnut Street was able to be opened

Additional cost of tower crane \$464,000

Keep mobile cranes because Susquehanna Health can't justify additional costs

Tower Crane Analysis

Critical Industry Issue

Problem Identification

Commissioning and testing/balancing on this project is a long and drawn out process that eats up schedule time. (215 days, 43 days/fl)

Project cannot be turned over until all commissioning and testing/balancing is complete

Research Goal

Reduce schedule allowing for commissioning to take place sooner

Use prefabrication to reduce total cost of project

Perform income evaluation to see income generated from schedule savings

Prefabrication Analysis

PRESENTATION OUTLINE:

- I. Project Background

Lessons Learned From Skanska

Never underestimate rate of productivity and always have a back-up plan

Delays in the field happen. Learn how to fix the problem without just throwing money at it

All aspects of the project team must buy into prefabrication

Utilize strengths to their absolute

Prefabrication Analysis

Problem Identification

Problem Identification

Very little value engineering was done on this project which is a problem for Non-Profit organizations such as Susquehanna Health

Last minute design changes lead a inefficient green roof, loss of concept in the design, and oversized steel

Green roofs are expensive and offer little payback especially in this design

Research Goals

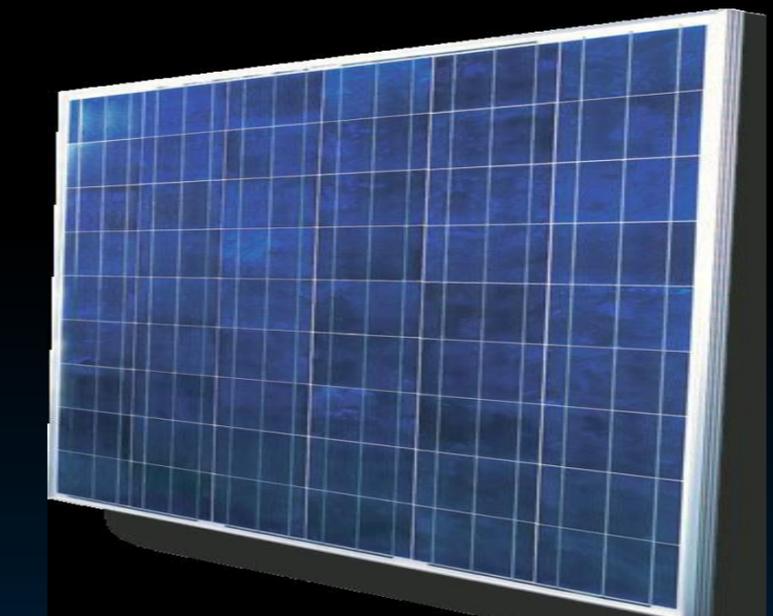

Reduce the overall cost of the project by value engineering green roofs and provide alternatives that align more with owner's goals

Roofing Analysis

Vegetative Mat with Nylon Entanglement

Poly-Crystalline Solar Panel

Problem Background

Roofing Analysis

Design Features

Multi-tiered green roof system gives patients a one-on-one relationship with a green environment

Green roof is a completely aesthetic feature and provides no substantial drainage or thermal benefits

Green roof used is very minimal vegetative mat with nylon entanglement

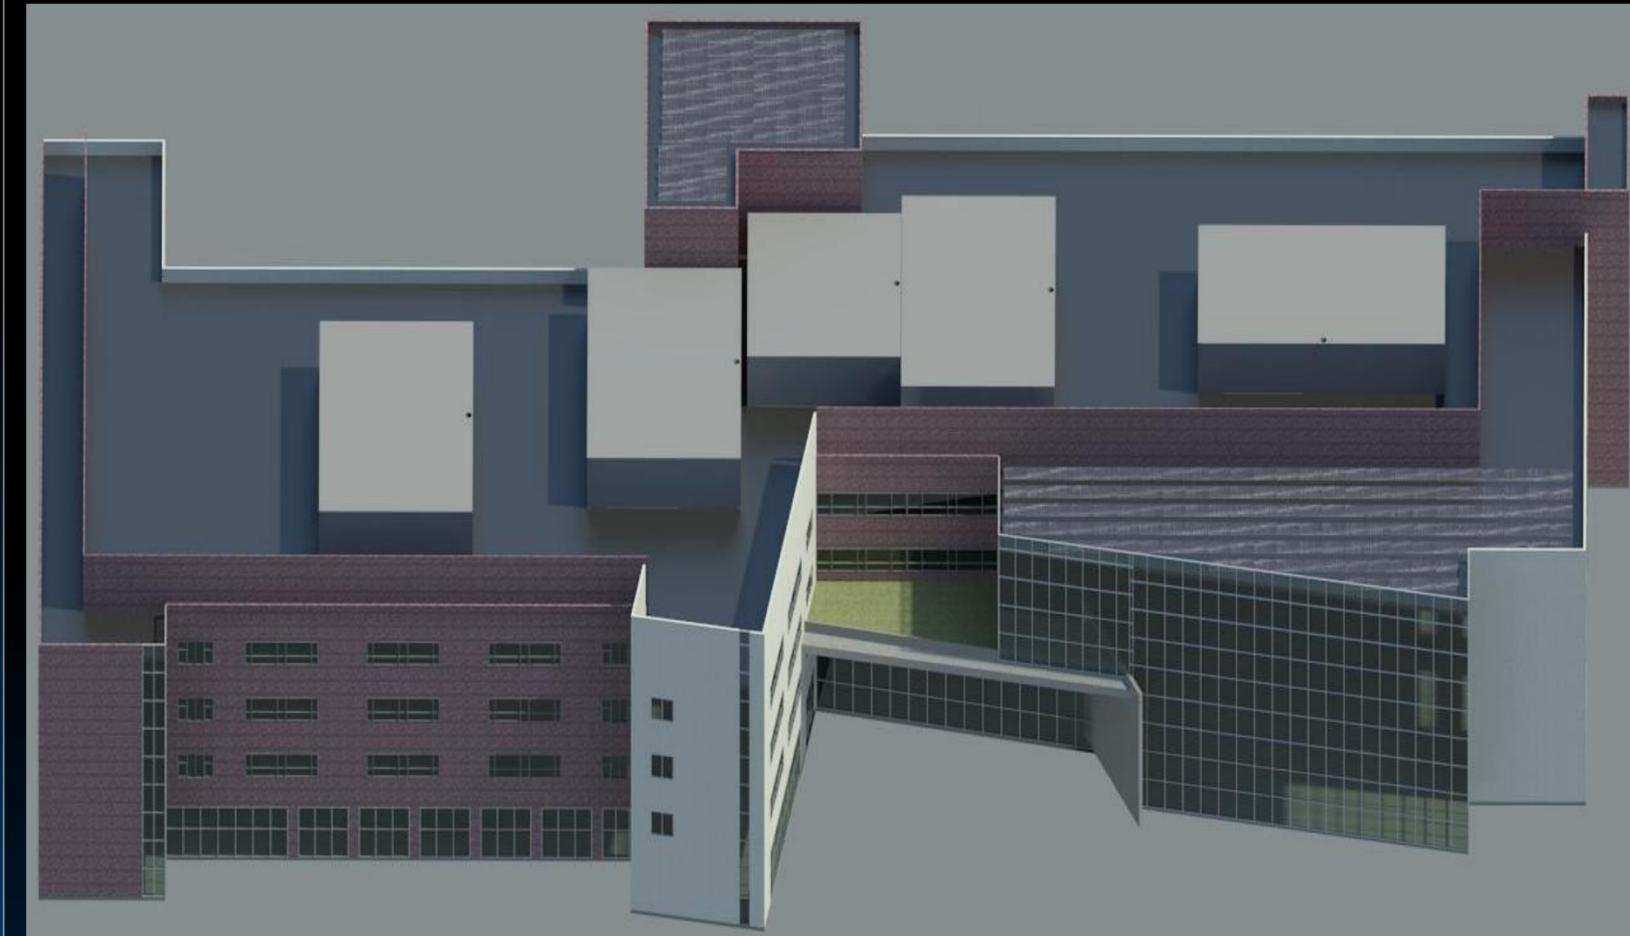

Simple EPDM Roofing

Current Design

Photovoltaic Design

PRESENTATION OUTLINE:

- I. Project Background
- II. Analysis 1: Shift from Mobile Crane to Tower Crane
 - I. Site Logistic Impacts
 - II. Productivity and Schedule Impacts
 - III. Cost Impacts
- III. Analysis 2: Use of Prefabrication in Patient Rooms

Structural Breadth

Steel Beam Redesign

Original Design Called For W16X31

After taking out the 7psf dead load for green roof it was determined that steel could not be reduced

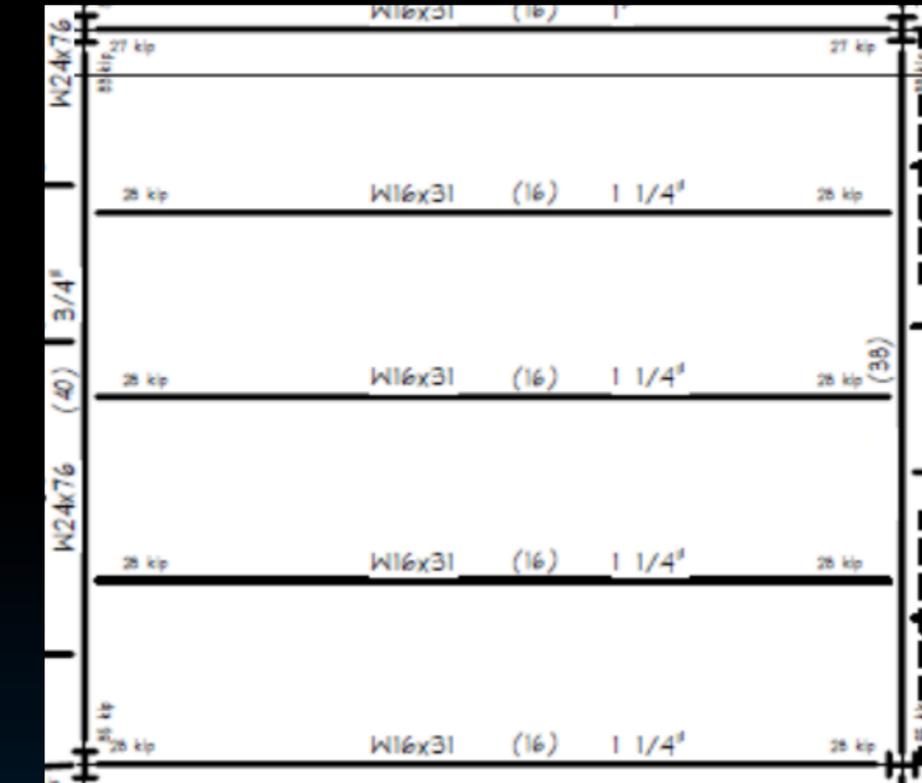

Girder Redesign

Original Design Called For W24x76

After taking out green roof dead load girders could be reduced to W24X68

Photovoltaic Roof

Basic Photovoltaic Information

- Roof Orientation-Directly South
- Membrane Mounted System
- 258 Poly-Crystalline Solar Panels
- 54.2 kW System
- Inverter located on roof behind parapet wall

Photovoltaic Costs

Photovoltaic Material Costs						
Material	Quantity	Cost Per Unit	Total Cost	Installation Cost/Unit	Total Installation Cost	Total
STP210-18/Ud	258	\$610.00	\$157,380	\$7.00	\$1,806	\$159,186
Sunny Tower with 6 Sunny Boy 8000US	1	\$20,816.80	\$20,816.8	\$500.00	\$500	\$21,317
4/0 Wire	160	\$35	\$5,600	-	-	\$5,600
Mounting	258	\$50	\$12,900	-	-	\$12,900
					Total	\$199,003

After Rebates and Incentives **\$165,661**

Payback Period of 25 years

Roofing Analysis

Year	Energy Cost (\$/kW)	Energy Savings (kWH)	Yearly Savings	Total Savings
1	\$0.09	59884	\$5,569.21	\$5,389.65
2	\$0.09	59884	\$5,569.21	\$10,958.86
3	\$0.09	59884	\$5,569.21	\$16,528.07

Conclusions and Recommendations

○ Value Engineer East and West Green Roofs

○ Leave steel overdesigned

○ Use money saved to put towards PV arrays and have a new payback period of 11 years
